74. [propnet] Version 2.1.1.x

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Mon, 3 Dec 2001 20:06:03 -0000

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-49948-2001.12.03-14.34.03--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have just discovered a wired anomaly with the SMTP portion of the new
version. It appears to be saving copies of the previous emails and adding
to the body of the text. Do not know why this is happening, but I will dig
into that tomorrow, mean time MAPI , file and clipboard work correctly.
Guess there may be something in the fine print I missed!!!!

Hi Jeff,

I just discovered the same thing. DownLoaded the new version yesterday
afternoon and installed last evening. Had it send me a report at 1100Z and
then again at 1800Z - looks like the email is cumulative! Now if you'd
wanted to add that feature it probably wouldn't have worked or would have
cost extra money to implement!!

Bob - KC5DUI

At this time I'm monitoring WP4NND attempting to connect to my station (from 2116z to 2133z)on 28.128. The coonect packets are about 3 seconds apart, and have been going constatly since 2116z. I tried connecting to his station, but without success.

Anyone else copying this today?

Around 2116z I noticed some strange sounding packet on 28.128. Monitoring I find that WP4NND appears to be sending connect frames to my station constantly, about 3 seconds apart. I tried connecting to his station without success. The packets have been going now for at least 20 minutes without stopping.

The tones on his end are very strange, with normal packet ending in a high pitched whistle, so my TNC is not regularly decoding him.

Anyone else copying this?

Rich

79. [propnet] Clock utilities

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Mon, 03 Dec 2001 14:34:38 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-49975-2001.12.03-17.02.52--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I found a clock utility called TAD that will set the OS clock from the RTC
clock. It's apparently freeware.

It's a DOS utility. I tried it on Windows NT 4, and expected it to blow up
for trying to set the clock, but it didn't. It appeared to set the OS
clock, which was only off by a second or so. So I imagine it will work on
Win9x as well.

It's at http://www.simtel.net/pub/pd/55066.html

This routine has a lot of other skills, including showing the difference
between the RTC and OS clocks, and even compensating for drift by measuring
multiple moments, calculating the drift rate, and applying compensation. I
didn't try this ...

I imagine you could run it from the scheduler in UI-View via a "RUN
x:\whatever\TAD -s" command.

There are a zillion clock utilities (and many others) on this site. Under
the Windows category, I didn't see any that do what this utility will do,
but there may be something here that will be of use to BEACONet. Look in
http://www.simtel.net/pub/win95/clocks/

Cool, Dave!  This looks like the routine that I've been waiting for!  My
```

6-meter VB-BEACONet station is in the basement (no GPS lock possible)
without Internet access. I'll be downloading and assessing later
tonight.

Thanks!
Ev, W2EV

Interesting! It sounds like he's set his retry rate quite high. Maybe
he'll pickup the web site info from your frame and actually join-in. :o)

Rendered body type: text/plain

The hissing sound that appeared like a curtain on the waterfall display was
MT63. The frequency of 28.130 is the standard calling frequency for this
mode on 10 meters.

Joe, KB1CJ

O.K., Joe, I will be the dummy who does not know (and can't find that
mode in my latest ARRL Handbook.)

What is MT63?

73,

Ed

I can save him the trouble. I always turn to google (www.google.com) to
answer questions like this - in fact, I use it as the "Home" page on my
browser just so it will always be immediately available. I searched on
"MT63". The very first hit is:

MT63
MT63 is a DSP based advanced HF mode for Amateur Radio, intended to provide
high
performance keyboard - to - keyboard conversational operation on HF bands ...
www.qsl.net/zl1bpu/MT63/MT63.html

I didn't follow the ink, but I presume it explains it adequately. If not,
there were other hits.

Rendered body type: text/plain

Looks very good. My OS clock will lose 20 seconds overnight, though the RTC
stays within seconds per week.

Looks like the instruction file is almost 10K, and there are enough options
to choke a horse.

Have you figured out the basics of how to use it? Care to post an "Idiots
Guide to TAD200"? Just the basics of how to calibrate and set it up to
automatically do a periodic correction? It would be nice to do the
corrections from Windows, whether UI-View was running or not.

Jerry W4UK

I found the bug that was causing the email messages to add to the previous.
I am sure I could have spent hours trying to write code to simulate that and
never got it correct.  It is posted to the web site.

Sorry it took so long to get back to that, but this is final week and I have
been a bit busy with that.

Jeff N7YG

I'm really watching the reports as we approach the winter solstice.
This report from Joe, for instance... I'm only a couple of hundred km's
away...yet I have yet to decode SM7XGS. Fascinating.
Ev, W2EV

PS...hey Earl, you got relatives in Needham, MA? :o)

Rendered body type: text/plain

I downloaded the software that Earl pointed us to a couple of days ago,
and have been running it on my WindowsXP workstation. Day 1, CPU
utilization bounced from 2% to 8%. Day 2 from 10% 20%, where it has
stayed. All I run is PSK31srv and UI-View/16. Very interesting indeed.
:o)

Of course...I have no idea what it actually means...but it's
interesting, none the less. :o)

Ev

Didja' try the time-sync function? You can set it to sync your clock anywhere from every 5 minutes to every 5 hours!

My CPU utilization stays at 100% -- I run SETI on my machine. And currently I have 473 megabytes of ram free...Nice software...

This software is similar to the Resource Meter in Windows. On Win9.x machines and possibly others, Right click My Computer and select properties. Find the Performance tab and select it. The second entry is the Free Resources indicator. I have also noticed a similar anomaly on my machine. The problem seems to be a memory leak in PSKSrv. After about a week or so you will see your free resources getting below 50%. This is the time to reboot and restart. You should see the free resource back up to the 70 - 80% level. Should not get below about 60% with UiView and PSKSrv running. The more resources consumed, the slower the machine will become and Strange things will begin to happen. The first indication is a mouse that has a sticking problem with the left mouse button.

Jeff N7YG

Rendered body type: text/plain

Hi All,

Its good to be back after AT&T broadband put me in a black hole for a few days. I saw the MT63 QSO on Sunday and wondered if anyone had any trouble decoding the PSK. I had a MT63 QSO a short time later 1 or 2 KHz above where most of the beaconet activity occurs and told the OM about beaconet and that his last QSO probably hammered beaconet. I am not sure how far away from a PSK transmission another station should be. Obviously the MT63 signal should not be right on top of the beaconet. BTW, since we all don't transmit on the same freq. (our sound cards and rigs insure this), how much bandwidth does beaconet occupy? I think most of the interference issues with the sound card modes are due to one station overpowering another station on an adjacent freq. I have 500hz and 250 hz filters along with bandpass tuning that really help when another station overpowers me on an adjacent freq.

MT63 is a great mode. What you saw on Sunday was the 1KHz wide, long interleaving version. Another popular setup for MT63 is 500Hz short interleave. I have not noticed much difference in performance, but theoretically the 1KHz long version should be superior when it comes to tolerating QSB and QRM. On 10 meters most of the activity is below beaconet on 10130.15 KHz. When 10m opens to Europe, you will find more MT63 activity.

Thanks Jeff!

This answered my question that I posted about 4 or 5 weeks ago. I just
thought that my computer resources were not adequate enough. PSK31svr crashes
"after about a week or so"

*** A 2-meter TransAtlantic Proposal ***

This is another of the occasional postings that I forward from the
BEACONet eMail remailer. BEACONet is a communications network (yes, the
system supports actual station-to-station communications) that -
additionally - is well suited to the study of propagation circuits
(among *many* other things).

The BEACONet^31 project (one aspect of the BEACONet system) uses PSK31
modulation, UIPacket-like formatted transmissions (similar to those of
APRS[tm]) and software (called UI-View, written by G4IDE) to display
receptions to a computer map.

The report seen below is a result of a "middleware" software package
that was developed. It keeps track of how often stations were received
and decoded. The software is called UIMailer (written by N7YG) and is
under development now. It provides an interesting documentation of the
previous 24-hours of propagation from the viewpoint of any participant.
Such reports are regularly shared on the BEACONet eMail remailer.

This report from N5RFX came from the 10-meter BEACONet^31 frequency of
28.131 MHz USB + 1500 hz PSK-Audio:

[CATCH] N5RFX BEACONnet^31 - 12/4/01 21:25:35CST

                              A=10, B=11, Z=36, *>36          G=65-128w
                                                             Next are
                                                             antenna
                                                             values:
                                                             o Gain
                                                             o HAAT
                                                             o Direction
```

Imagine a system like this on 2-meters. Stations on either side of the Atlantic Ocean with antennas aimed at each other. Every few minutes (24-hours a day), each one would transmit (there is a frequency scanning and collision avoidance mechanism built-into this system), probing the "ether" for an opening across the ocean. When it occurs (optimistic?) UI-View can announce it. With the operators alerted, they may simply come to the keyboard and complete an actual QSO...fully documented for Brenden Trophy (http://www.irts.ie/brendan.htm) submittal. :o) Given the fact that multiple people would probably be scanning at the same time, the proposed system has built-in peer verification!

There are three questions...
o Wouldn't this be an interesting system to deploy as part of the
  year-long observance of the Marconi transatlantic success?
o Is there any interest in Europe or Africa in such a system?
o Where (in frequency) can we land this system?

144.288 MHz was previously suggested as a possibility. Given the level of European SSB activity that appears to occur at 144.300 +/- 100-kHz, this was quickly discounted. What we need is a frequency that is common to both continents, but to be used only only within 100-km from the shoreline (as it is doubtful that the "lift" or "duct" will extend much beyond that inland).

Is commercially available 2-meter equipment stable enough in frequency to "blindly" tune-in the frequency of another station, that is as of yet unheard, in order to await the opening? I don't know. :o)

In the USA, there are three frequency bands that are candidates for this type of operation. It would be interesting to see if there is any corresponding coordination (or interest in coordinating) in Europe or Africa.

According to the American Radio Relay League's band plan for 2-meters:
---
o 144.300 MHz to 144.500 MHz (OSCAR sub-band...but w/o use to my
                              knowledge)
o 144.900 MHz to 145.100 MHz (noted as narrowband and FM simplex)
o 145.500 MHz to 145.800 MHz (noted as experimental modes)

I would favor the OSCAR sub-band, only with the understanding that BEACONet operation would cease when an OSCAR flew.

Is there . . .
1. An interest in a Transatlantic 2-meter attempt using BEACONet^31?
2. An interst in working on a common frequency (500-hz of spectrum),
   in a positive, healthy way?
   - how is this best accomplished?

Evhen Tupis, W2EV

Hi Mark,
Thanks for the note on MT63. I see that "fuzzy" bar at the bottom of my
waterfall from time to time, too...but it never causes me any problems
with decoding BEACONet^31 here.

As for "bandwidth consumed" by our ^31 operation...I've set my system to
scan +/- 250 hz with great success. The idea was to accomodate folks
with 500 hz filters. :)

It seems to work for me.

Again...thanks for clearing up the mystery of the fuzzy bar.
Ev

Have the antenna disconnected today due to the possibility of thunderstorms
but left the software running. Latest release of UIMailer2 seems to be
working fine - is sending out only the current data instead of a compilation
of the previous messages. I really like this program!

Storms are forecast through tomorrow so may be down another day.

Bob - KC5DUI

Bob
A bit late in the season for all those T-storms. I remember when I was in
Little Rock for C-130 school (summer), seems like every afternoon around
1530 local, we spend most of our time dodging some relay nice bumpers or
some clown in a Cessna 150 that pops out of nowhere.

Jeff N7YG

I am going off the air for a while to work on other projects that require
the sound card. Will be back up in the morning.

Jeff

```
Mark has discovered a new quirk that I will need to diagnose.  If you set
the UTC offset to a positive number, the scheduler goes berserk and starts
sending out emails every second.  I have duplicated that problem here.
Infact because I am online all the time, it really hosed up my connection to
the internet.

If you are in the western hemisphere, then the UTC offset sould be a
negative number.  Midwest is -6 eastcoast is -5 westcoast is -8 and those of
us in the mountain zone are -7.  Setting a negative offset works fine.  I
will look at this later this afternoon and try and find a solution.

Jeff

I found the bugs in the UTC Offset code and have correct the code. I am really surprised with the typos I found the code actually compiled. Build 6 is on the web site.

I Just called up the UiView map and discovered the band is really dead. Only one station and that is mine. As I went to check the numbers on WWV, I then discovered the reason for the dead band. NO POWER TO RADIO!!!!

Confucius say: He who actuates power switch, cause electron flow.

Rendered body type: text/plain
```

```
Hi guys,

as you undoubtely have noticed, my station is barely on the air these days.
That has to do with a power-connector problem, and I think I will have to
replace both the TRX side and the cable side. Both connectors are heavily
oxidated, probably because of spark bridges and bad contact, and initial
cleaning attempts have not yielded the desired results.

On top of that, I will be travelling from December 16 to 30. First a week of
business (Sweden, Denmark, and London), followed by the Christmas week at my
parent's place in the Netherlands. Let's see if I can convince my parents to
run PSK31 for those days, if so I will use either PA3GMK or PA3GTI as
BEACONet^31 call as not to confuse your logs... They run a TS850 into a 2
elements 3-band quad antenna. Should work without any problem. I will keep
you updated.

Last, my company went through a major wave of layoffs during to last 2 days.
```

About 1200 persons (or 25%) were let go. Luckily, I seem to have been spared
this round. :-)

73s,

--Ramon W1/PA3EUG, Boston, MA, USA [FN42KI]

154. [propnet] Back in the Saddle again ,DSP,Back scatter

From: RickfordG@aol.com
Date: Fri, 7 Dec 2001 20:53:13 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-50816-2001.12.07-20.21.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all

Looks like I am back on the air again (BEACONet^31.) I spent the last week fighting a hard drive crash (I think do to a power failure) on the computer that I was setting up to put on BEACONet. On top of that the old computer that I was using just could not hack it do the memory leek that PSK31svr has. I could not figure out why the computer kept checking the hard drive and floppy drive (swap files) bringing the thing to a halt until it found what it was looking for. The first thing that would happen would be that UI-Path would crash. I quit running it and them PSK31svr would crash. Well, the heck with that!

The computer that I am running now is a bit faster and has more memory. In fact there are a lot of things about this puter that is better then the last. Nonetheless it is still a boat anchor so If anyone sees a problem with my beacon please let me know.

On another note.

While I was trying to put my best foot forward for BEACONet I started playing around with Sound Card DSP filters. I found "Croma sound" to be quite interesting. If you all have more then one puter in the shack give it a try.

Back scatter.

Before I had a S**T load of puter problems I was playing around with Back scatter results. It looked quite productive! I lost the info do to the Hard drive crash. I can tell you all that 2 stations rapidly reported hearing me that I never heard. I plan to resume the testing as soon as I get a good report on my beacon.

Last but not least:

I heard from all of the Districts in VK land. I did recieved a fiew nibbles but nothing concrete.

Rich

158. [propnet] Re: Back in the Saddle again ,DSP,Back scatter

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Sat, 08 Dec 2001 08:20:26 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-50889-2001.12.08-07.50.39--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I was about to ask if you were ok...or if propagation was "skipping"
over you. :o)

A couple of quick observations...
I've been running PSK31srv (1.08) and UI-View (2.38) for 6-days straight
without lockup. My resource monitor shows no more than 20% CPU usage at
any given time and I'm not using any other program (no antivirus, no
nothing). The idea was to see how much of a memory leak this system
has.

I'm starting to think that there isn't much of one (if at all). This is
good and bad. It's good because Roger has made it painfully obvious
that he has no desire to perform *any* further work on PSK31srv. If we
had found a leak, we'd be hard pressed to get it fixed. So...I'm happy
that the indication (at least from my test) is that there isn't any
leak.

The bad news is that, if one is experiencing resource leaks, it's time
to go on a hunt to see what program it is and take care of it.

By the way...if I wrote a one-page article on BEACONet, would you
forward it to your VK contacts with permission for them to print it in
their newsletters or forward it to their membership vis eMail? I've
found that there is some misconception about it (it's APRS, right?, it's
an unattended propagation beacon, right?, etc.) that could be
straigntened out with a little info.

Anyway...welcome back, Rich!
Ev

It could be. :o) But only if one sees TV stations as the same thing.
There are folks who watch unassigned UHF TV channels in the summertime
to see if the "band is open". BEACONet is much like that. It is
configurable for meteor scatter, rover tracking and propagation
tracking.

There is even much more that BEACONet is capable of, including
keyboard-to-keyboard messaging (something that an unattended propagation
beacon can't do).

See who's coming-in on your map at any given time, and try to send them
a message (it's a pull-down menu in UI-View). At PSK31 speed, it takes
a while, but it works! :o)

161. [propnet] 6 meters down :-(

From: Earl Needham <needhame@yucca.net>
Date: Sat, 08 Dec 2001 07:57:58 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-50902-2001.12.08-09.26.20--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I discovered last night that my packets aren't being transmitted on six
meters. Upon further investigation, I have discovered that my FT-690R2
won't go into transmit mode, with either the TNC or the microphone. Thus,
I am off 6 meters for the foreseeable future.

        7 3
        Earl

        OOPS! I found the offset had been flipped to "+", so the rig wouldn't
transmit out of band! It's fixed, and I'm NOT out several hundred dollars
for a new rig! (I've had the 690 so long that it probably wouldn't make
sense to repair it...) I wonder how long it's been since I haven't been
transmitting!

Hi folks,

I did some radical hardware configuration changes and I'm up and running
again. Please comment on my signal quality.

Thanks,

--Ramon w1/pa3eug Boston, MA [FN42KI]

```
Ramon,
You are coming in with a very strong signal, but psk31srv is having a tough
time decoding your signal. Your signal is a bit wide, and it seems to not
get a good lock on you.

Jesse n2vrj

170. [propnet] Just a little observation

From: Jesse L Carroll <n2vrj@home.com>
Date: Sat, 08 Dec 2001 18:55:03 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-50939-2001.12.08-13.23.16--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Just a little observation about my report earlier. I found it
interesting that I heard WI3X from about 10pm -11pm, and WD4RBX
from about 11pm- 1:30am local time, last night.
It got me to thinking that I really needed to get Mailer2 working
on my computer. I never here stations during that time of the
night. Or do I? Had either of those stations shown back up this
morning, before I checked, I would have never known.
I guess what I'm getting at is, those of us who haven't starting
using it yet, may want to consider switching to it. We may be
missing some really neat propagation info.
I'm glad to say that I finally have it working, and will be using
from now on.
:)
Jesse

Rendered body type: text/plain

Hello all,

I've begun to have a lot of BEACONet-related wishes, as all of us must, and
I think it's time we start compiling them somewhere. Ev, maybe we could
get a form on the website for that.

First, I wish many of us could get together for a discussion, perhaps at a
major hamfest in the next year. Dayton? Some digital conference? Someplace
warm in winter?

I think we are going to need better software, more capable of BEACONet
tasks, both in the psk31 server side and the client side.

I'd like to be able to alternate configuration codes and antennas every
transmission, with an output that would drive an antenna relay or switch box.

I'd like the psk31 server to be a lot more knowledgeable about BEACONet
protocols. After watching signals almost on top of each other both in
frequency and time, with only six stations I can hear, I know we are going
to need much better spectrum management if this mode is to be any use. We
need a server that is adaptive: it needs to see where the signals it
receives are found, in time and frequency, and select its own frequency and
beaconing time to minimize the chance of stepping on another signal. It
needs to output imperfect reception to its clients, certainly with a flag
that says whether CRC was validated, and hopefully with some other
indication of the degree of goodness of its copy.

The software ought to be able to get real-time information from the web
about who's on, so it could make better analysis of partial copy. It
obviously ought to be able to upload catch info in real time or on a
regular basis, both to enable others' signal recognition, and as the end
product of BEACONet (isn't propagation detection why we're doing this,
after all?)

As long as we're talking real-time internet connection, the software should
facilitate web-based chat among users, without having to use other software
to accomplish this. I'd like it to have scheduling capability, at least as
regards start and stop times. If it had more complex capability, such as
frequency control via computer-controlled transceivers, that'd be
great. If it had remote-control capability via the web, or even some way
to monitor proper operation, then I'd feel better about leaving a beacon

running while not at home.

My biggest wish, I guess, is to get a better understanding of the objectives of BEACONet and of our group. I don't know much about Web programming, nor about digital signal processing, but I do know how to plan software projects in general. I know that we are now in the experimental and experience-acquiring mode, but we will need to shift soon to the functional specification phase (what do we want to be able to do?). If this can't be done face-to-face, maybe it can be done via conference call or webphone.

Thanks for listening. I still receive the usual five or six of you on a regular basis, and I see partial copy from many of the rest, France included, most early mornings, but those stations rarely plot. (As I write this, I see Ev messaging Jesse, but I can't seem to make this work for myself.) I don't report catches, because I get very few with correct CRC, and would produce a lot of noise if I let it happen automatically. I still note, though, that even though callsigns are often garbled, I get pretty good copy on configuration codes and grid squares.

As I mentioned a while ago, I'm taking BEACONet to Hawaii December 29 - January 13, and have assembled the portable station, including my Outbacker vertical and a 22-foot telescoping fiberglass pole that I hope to use to support a dipole or some other slightly directional antenna. If anyone has any specific ideas about what kind of experiments I might conduct there, please forward them.

Finally, I note that the Kauai ARC meets on January 7, while I'm there, and I hope to get 5 minutes to pitch BEACONet at their meeting, and perhaps recruit an enthusiast (preferably one with a location up 1000 feet on the northeast side of a mountain). If anyone knows a digital enthusiast, perhaps someone already running PSK31, on Maui or Kauai, please forward contact information.

End of message for now. Let's make 2002 a breakthrough year for BEACONet.

73

Dave

Just a note Jesse. I noticed the same thing last nite
To let you know, I turned my transmitter off just after 11:00 EST. or you
may have received my signal much longer. I hope to have my equipment up 24
hrs. a day by the end of the week and participate on a regular basis.
Also, if anyone could give me a report on my signal quality, I would
appreciate it.
Dane-WI3X

Hi Jesse

Yes, I did hear you! I am still fighting my hard drive crash (drive D) and
just now got the ham shack computer back on line. I lost a lot of very
important data pertaining to BEACONet.

Rendered body type: text/plain

Hi Ramon,

I was off the air until about 1600z today (8 Dec) and only had one full plot
on you - 1658z. Could see your signal - very strong and wide - but PSK31Srv
couldn't get a good lock. Would stop, decode just enough so I could tell it
was you and then move on. Appeared that PSK31Srv didn't LIKE your signal.

Bob - KC5DUI - EM26WE

----- Original Message -----

Hi folks,

I did some radical hardware configuration changes and I'm up and running
again. Please comment on my signal quality.

Thanks,

Hi Skipper

I lost all of my contact info when my D: drive crashed. Not to mention
hundreds of family photo's and much more. Fortunately all of our small
business files were backed up and moved (we have four computers) to this
computer. What really sucks is that Ruth and I planed to buy a CD Burner
after the first of the year and use it to archive all of our important stuff.
No rush now!

Tell you what, Go ahead with your one page article about BEACONet. I do have
a pen and paper (sort of) record that I can use. Also, I am not finished
being the BEACONet, PR man LOL. Refine your article so that It could also be
used for (First contact) and I will use it in my quest for the "BEACONet"
Stations. It will be hard to go back but, I will use it to go forward!

Little Buddy
Rich
WD4RBX

```
This actually correlates well with a conversation that Jesse (N2VRJ) and
I had at 1800UTC on the phone.  He said I was coming-through very loud
and we should give a keyboard-QSO a try.  In the time that it took to
hang-up the phone and give it a go...the band died for us.

Fascinating!

Ev, W2EV

THIS, OF COURSE, RELATES TO OUR ULTIMATE OBJECTIVES,
MORE COMMENTS ON THAT BELOW

>
> The software ought to be able to get real-time information from the web
> about who's on, so it could make better analysis of partial copy. It
> obviously ought to be able to upload catch info in real time or on a
> regular basis, both to enable others' signal recognition, and as the end
> product of BEACONet (isn't propagation detection why we're doing this,
> after all?)
>

AMEN TO THAT.   I CAN NEVER TELL IF THE REASON I SEE
A LOT MORE STATIONS ON THE WEEKENDS IS:

(A) MORE GUYS TURN THEIR RIGS ON OR

(B) THERE IS LESS QRM IN CORONADO BECAUSE THE
BOYS ARE ON LIBERTY OR

(C) THE WEEKENDS JUST HAVE BAD PROPAGATION

(TONGUE IN CHEEK!)

>
> As long as we're talking real-time internet connection, the software should

>

SOME OF US, RETIRED, HAVE THE TIME TO MONITOR THE WEB
PRETTY MUCH ON A 24/7 BASIS.   WE COULD SERVE AS
THE REAL TIME "MONITORS" IF
THERE WAS SOME WEB BASED MONITORING FACILITY

>
> My biggest wish, I guess, is to get a better understanding of the

> this can't be done face-to-face, maybe it can be done via conference call
> or webphone.
>

FROM MY POINT OF VIEW, NOT BEING A "RAG CHEWER" OR
"DXER," USING THE BEACONET AS A MEANS TO MAP THE
EBB AND FLOW OF THE 10 METER COMMUNICATIONS PATH
WORLDWIDE AND THEN WORKING TO CORRELATE THAT
TO THE DATA THE SOLAR GUYS PUT OUT WOULD BE AT
LEAST ONE "NEAT" OBJECTIVE.

>
> Thanks for listening. I still receive the usual five or six of you on a

1) Can someone pse watch my signal and let me know if I am overdriving or
does it look accepable.

2) I would like to set up for 2m packet on 147.585 BEACONet but I need to
know if there is enough activity to make it worthwhile.

Thanks
Dane-WI3X

Hi Dane,

>1) Can someone pse watch my signal and let me know if I am overdriving or
>does it look accepable.

>
>2) I would like to set up for 2m packet on 147.585 BEACONet but I need to
>know if there is enough activity to make it worthwhile.
>
I can't help with the first, but the answer to the second is that there
is very little activity on 147.585 right now...except for a rennegade
bunch that is running gallons of power, with beam antennas, pointed at a
repeater in Mass. (ok...that was a joke in reference to a previous thread).

Expect more activity building in the summertime, and around VHF
Contests. There is a group of contest rovers that is geating up for the
use of VK-BEACONet.25 (that's 2-meter, AX.25) during the January VHF
Sweepstakes. The deal is, they will *not* be setup to HOPn-N digipeat.
 Doing so would violate the rules. However...if memory serves, you're
in FN10, which is in-range from a couple of hilltops that they will be
operating from. There are three Western NY rovers geared up to use
147.585, with two more under development. At least one of them will be
in FN10 for the contest.

Now would be a good time to gear-up to hear 'em.

Ev, W2EV

Rendered body type: text/plain

The data is befuddling...we need more. Please, gear up to operate the
Geminid meteor event, peaking December 14th (or so). Register your
intent on http://go.to/METEORegistry.

In previous years, the SSB/CW crowd lamented poor Leonids rates. We saw
alot of success. This year, 2-meters seemed like 20-meters for the
traditional rock-hunters...and we saw very few returns. The theories
are bouncing around, but we need another event's worth of data. Help,
please by activating for the upcoming Geminids.

I've already registered. Please, do the same.

Ev, W2EV

195. [propnet] RFI problem... seeking advice

From: Ramon Kolb <ramon.kolb@usa.net>
Date: 9 Dec 2001 17:08:02 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51170-2001.12.09-16.37.01--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi,

I have a question for you "experts" out there.

My ALC meter shows more or less MAXIMUM READOUT on my station... this is BAD.
Now, if I touch my TRX with both hands, the meter readout goes to 0 while
maintaining output power. I suspect some grounding problem here. My PC and TRX
are optically separated using one of the BuxComm boxes, my power supply is
grounded at the negative. Tried using a grounded outlet and a non-grounded

one, the non-grounded one is definitely better.

Anyone any tips? I'm definitely not a master at debugging my ground
connections... (I know it should be starred and not looped, but that's where
it about stops)

Thanks,

--Ramon

200. [propnet] Uimailer V2.x problems

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Mon, 10 Dec 2001 01:17:29 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51253-2001.12.10-02.45.46--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have been chasing the problem of the Mailer sendout out multiple email depending on the setting of the UTC offset. When I wrote the routines to compare the time to send out the email against the computer time, I based the timer routines on my 350MHZ computer. Those who have faster computers or faster mother boards have discovered that my routine is a bit failing.

I have updated those routines and I hope this will cure the problem. If you are having this difficulty, download build 8 from the web site. I will work on rewriting these routines to trigger an interrupt in a future release.

Jeff N7YG

Dave's message got me to think a bit! Part of the problem with signals on-top of each other is actually UI-View. If everyone has the clock set within a few milliseconds of the correct time, then depending on what is set in the internet beacon everyone will be on top of everyone else at some point in time.

I did some timing this morning and it appears the average time for a PSK transmission is close to 20 seconds. This will vary with Uppercase and lower case letters and how long the preamble is. With this in mind, then 2 stations can transmit each minute on a specific frequency. Using a 15 minute interval between transmissions, then 30 different stations should be able to occupy the same frequency and not conflict with other stations.

Lets take this a step further. If we can come up with some sort of channel plan, say 7 channels spaced 50 Hz apart, then 210 station could be easily accommodated with out interference to other stations.

This will require software that currently is not available. The only PSK software that I am aware of that will do multiple channels is the one by W1SQL www.faria.net , but I doubt Joe will be willing to rewrite to accommodate our needs.

I have been investigating the PSKCORE.DLL file that is the root of many of the PSK programs currently on the market. The routine is capable of 50 channels maximum, but I think 7-10 is more like it without eating up windows resources. If we can get a program to copy 7 channels without a lot of overhead, then adding the routines for transmit at a specific time slot, on a specific frequency, is a piece of cake. Adding a map display and we should be able to do away with UI-View thus rolling everything into one software package and eliminating the internet client/server relationship that now exists.

Just some thoughts.

209. [propnet] Fwd: AstroAlert: Geminids Offer Last Chance for Meteor Observers

From: Earl Needham <needhame@yucca.net>
Date: Mon, 10 Dec 2001 20:38:37 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51426-2001.12.10-22.07.18--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

```
>The Geminid meteor shower will peak Thursday night/Friday morning
>December 13/14 offering meteor observers a last chance to see impressive
>activity until next summer's Perseids. Circumstances are excellent this
>year as the new moon occurs the same day as maximum activity. The
>Geminids can produce more than 100 meteors per hour if seen from rural
>areas.
>
>This is one of the few showers that is visible during the evening hours
>as the radiant rises near 1800 (6pm) local time for observers located in
>the mid northern latitudes. It rises earlier the further one moves north
>and just the opposite as one moves south. This shower is observable from
>the Southern Hemisphere but at much reduced rates.
>
>On the night of maximum activity the radiant is located close to the
>bright star Castor, which marks the head of the western twin. Low rates
>may be seen as soon as it becomes totally dark. These early meteors will
>be earthgrazers as the travel the sky many tens of degrees lasting
>several seconds. As the night progresses the meteors will become shorter
>but more numerous. The strongest rates will occur between 0100 and 0200
>local time when the radiant lies highest in the sky.
>
>The Geminids strike the earth in a perpendicular angle which produces
>meteors of medium velocity. Of course this depends on where you are
>facing and where the meteors occur. Those that occur near the radiant or
>near the horizon will appear slower than those appearing high in the sky
>and far from the radiant.
>
>The Geminids are the only major annual shower produced by an asteroid.
>Studies have shown that Geminid meteors are indeed more dense than other
>showers produced by comets.
>
>The Geminids are well known for producing bright, colorful fireballs
>often resembling Roman candles. Being bright and slower makes them an
>easy target for astrophotography.
>
>Should the forecast for Thursday night be cloudy in your region good
>Geminid activity may be seen on Thursday and Saturday mornings.
>
>Don't expect to see much activity by strolling outside and simply
>looking up. Your eyes need time to adjust to the dark. Your neck muscles
>will also tire quickly. If you wish to see some serious activity you
>need to lie in a comfortable lounge chair. Unless you are located in the
>tropics a sleeping bag or heavy blanket would certainly help you remain
>comfortable. Geminid meteors can be seen in any portion of the sky. It's
>best to look at least halfway up so that none of your field of view is
>wasted on the ground. That streetlight located across the street will
>not help either. To see this display in all its glory you need to get
>away from all sources of artificial lighting to some safe rural area.
>Usually the local astronomy club will have a rural site available for
```

>observing.
>
>If you wish to do more than just watch, then it is useful to know that
>scientific data can be obtained by simply counting the number of
>Geminids and non Geminids seen. The start and ending times should be
>recorded along with any breaks taken during the observing session.
>Shower association will be easy as the Geminid meteors will all have
>parallel paths and come from the same general area of the sky. They will
>also have a similar velocity as seen within your field of view. Non
>Geminids (sporadics) can travel in any direction at any velocity. If you
>are familiar which the magnitude system it is also helpful to list the
>magnitude of the faintest star you can see in your field of view.
>Typical urban estimates should be near +5.0. Rural skies are better at
>+6.0 and higher. If you are really enthusiastic then you may wish trying
>to record the time and magnitude of each meteor seen. Of course if
>activity becomes too high then a simple count per minute will suffice.
>
>Meteor reports can be sent to me at: lunro.imo.usa@home.com and to Sky &
>Telescope at: observers@skypub.com
>
>For more information on observing meteors visit the Sky & Telescope Web
>Pages at: http://www.skypub.com/sights/meteors/meteorwatch.html
>
>A weekly preview of current meteor activity is also published each
>Thursday at: http://www.amsmeteors.org/lunsford/
>
>Clear Skies!
>
>Robert Lunsford
>Secretary-General of the International Meteor Organization
>Visual Meteor Program Coordinator of the American Meteor Society
>Meteors Section Coordinator of the Association of Lunar & Planetary

210. [propnet] More Geminids Participants Needed

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 11 Dec 2001 06:31:48 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51469-2001.12.11-06.05.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Something goofy happened during the Leonids '01 event that needs further
study. Ideally, we need to wait until Leonids '02 to run again, but
let's not wait. The Geminids fall on Thursday night/Friday morning (the
peak). Please, power-up and help the study, would you?

UI-View and APRSdos both have a Meteor Mode. Join us and help to
understand why the '01 Leo's didn't roar as well for packet-based meteor
scatter as it has in the past (when we actually had better results than
some of the SSB/CW crowd).

Register your intent to operate at http://go.to/METEORegistry.

Ev, W2EV

Rendered body type: text/plain

```
Hi all

I found another VERY interesting program that we could as a PSK31 interface
to UI-View. If nothing else it certainly would be a good tool have in your
BEACONet arsenal.

This program is a bit over my head but I have been playing with it about a
week and I am already considering paying the $80 bucks for it. Don't panic
just yet! The program will run for 30 minuets (fully functional) so you can
evaluate it before shelling out the bucks.

You can set up UI-View to connect to Analyzer2000 via Localhost:5555 and
collect your catches :-)) No extra programing for BEACONet. I hope that this
little bit of info will interest some of you all to down load Analyzer and
see what you think. I would like some input from the group before I buy.

One draw back (I think) The RX and TX are coupled.

If nothing else go the website and give it a read.

Rich
WD4RBX

224. [propnet] Re: Analyzer2000

From: RickfordG@aol.com
Date: Wed, 12 Dec 2001 08:43:24 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51660-2001.12.12-08.11.56--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all

I also failed to mention that I have not tried to TX my beacon via Analyzer
because the computer I was playing with it on does not have a PSK interface
and If I could have my beacon would move all over the audio freq range.

Rich
WD4RBX

I'm trying to use the Message function of UI-View32. I can fill in a
message on the Message screen, but it just sits there ... I don't think
psk31srv knows that it is supposed to do something. Is there some other
setting I need to make this work?

Thanks.

Dave

Send it via interface "I" (capital letter i, not the number 1). That should
solve your problem...

238. [propnet] Geminids Meteor Scatter Event - METEORegistry

From: Richard Parry <rparry@actionware.sdcoxmail.com>
Date: Wed, 12 Dec 2001 19:27:42 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>

Message-ID: <LYR1548-51757-2001.12.12-21.56.02--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Just a remind about the Geminids and METEORegistry Registration:

If you will be participating in the Geminids Meteor Scatter event, the
METEORegistry web page is available. I see 11 folks have signed up so far.
The purpose of registering is to provide a real-time list of participants
to expedite communication and increase the chances of success. There are 9
questions, it takes about 1 minute to complete. The Geminids fall on
Thursday night/Friday morning (Dec 13/14).

Click on the URL below and then click on the "Register here" link.
http://w9if.net/cgi-bin/beaconet/main.pl

good luck, W9IF
Rich Parry

Hey Ev,
I really don't have any plans, nor interest, in dumping the AX.25 station on
10m for another digital mode. I'll be here 24/7 to receive K9ER's and
KD5CFB's AX.25 packets, and report them as they come in.

Rich

246. [propnet] Version 2 Sorting

```
From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Thu, 13 Dec 2001 14:15:37 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-51904-2001.12.13-15.44.07--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain
```

I have notice there seems to be a problem with my sort routine. If there are an even number of catches, then the last catch in the list is not sorted. It appears to be sorting correctly with an even number of catches. Not sure why this is happening, but refer to the tag line of this email for further guidance. I will try and trouble shoot this one in the next few days.

I have been off the air a few days as I work on another project, unrelated to BeacoNet.

>
>Space Weather News for Dec. 13, 2001
>http://www.spaceweather.com
>
>The days ahead are good ones for sky watchers.
>
>First, the annual Geminid meteor shower -- one of the year's best -- peaks
>Thursday night and Friday morning (Dec. 13th and 14th). If predictions are
>correct, as many as 100 shooting stars each hour will stream out of the
>constellation Gemini.
>
>Then, on Friday, Dec. 14th, the Moon will glide in front of the Sun for a
>solar eclipse visible from Hawaii and much of the Americas.
>
>After sunset on Friday and again on Saturday, Dec. 15th, high-latitude sky
>watchers should be alert for possible Northern Lights triggered by recent
>solar eruptions.
>
>And finally, on Dec. 15th and Sunday, Dec. 16th, an unusually big and
>bright near-Earth asteroid named 1998 WT24 will race across northern
>skies. Amateur astronomers can see the approximately 9th-magnitude object
>using modest backyard telescopes.

254. [propnet] [CATCH] BEACONet (Meteor Mode on 28.128) 14-Dec-2001 13:00 UTC

From: "David Burkholder" <kd5cfb@msn.com>
Date: Fri, 14 Dec 2001 14:38:34
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52061-2001.12.14-15.06.56--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

No luck on this shower. Ran into a few problems operating meteor mode. For
some reason my transceiver's (Icom IC-725)output power dropped almost in
half after running for a while. Started at abt 15 watts and dropped to 7 or
8 after the first hour or so of operation. Decreased the burst duration to
10 seconds, but that didn't make a difference.

A front of thunderstorms passed through in the early evening so that may
have affected the propagation.

Hi Dave,
I'm quickly approaching my wits-end with Windows XP pro and legacy
software. I engaged VK.25 meteor mode, with everything working fine at
11:00 pm, only to awake with it not transmitting at 6:00 am. arggggghh!
It appears that there is something goofy going on with my serial port,
so I don't know if it was accepting anything from the TNC either. A
complete wash-out for me.

This was quite disappointing, as I needed valid data from this shower
badly. We've enjoyed such good success in the past and such dismal
results in the November Leonids, I needed to see something here. Oh
well, "the truth is out there somewhere". :o)

One last try in early January, crew. Then, it's time to hang it up
until summer again (at least for major meteor events).

Ev, W2EV

>One last try in early January, crew. Then, it's time to hang it up
>until summer again (at least for major meteor events).

Now Ev, don't forget there was some success last year with the eta-Aquarids
(Apr 29 - May 06, 60/hr, 66 km/s) when KB0OBT heard my station on 2m on 4/29
and 5/4, and we had some activity in early June on 10m with the Arietids.

These might not qualify as "major" meteor events, but they're good enough
for BeacoNet.

```
Hi all,
 Are any of you that use a Radio Shack HTX-10 experiencing trouble with a "BAD" volume control?  The
Volume has become intermittent, cannot be lowered to a low level.
I opened it up and sprayed contact cleaner into it, but this did not help in the long run.
Looks like I will off net (lurking) until I get this fixed.  Hope I can find a replacement!  Maybe just
hang a new one off the side and wire it into the PCB!  Ha , Ha!!
Ugly but it what the heck!
By the way is anyone still on 6, AX-25. I am still beaconing there. I have never received any other
stations on this experiment!
Wayne

HI Wayne

Yes, There are at least 2 active AX-25 stations in the US. I don, t know
about the rest of the world. I am working on that ;-)

About your bad pot (volume control) If you can't replace it a simple
solution that I use is to put another pot in an external speaker or in line
with your sound card input cable. This is Mickey Mouse engineering at it's
finest.

269. [propnet] Dane's fixed-pitch font report

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Sat, 15 Dec 2001 09:07:06 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52176-2001.12.15-15.03.43--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all,

I use a proportional font for my email program (Eudora), and I receive the
propnet mail in a daily digest, so usually the catch information (now that
people are sending it with the new mailer by-the-hour format) doesn't look
like much.

But yesterday, Dane's Dec 14 19:08 posting came through in a fixed pitch
font, and was perfectly readable. It had a header on it that looked like this:

--------------010904060706000004090100
Content-Type: text/plain; charset=us-ascii; format=flowed
Content-Transfer-Encoding: 7bit

How'd you do that, Dane? Did this do the same thing for other email
clients? Jeff, could it be built into UI-Mailer so that everyone's catches
automatically came in fixed-pitch?

Hi Dave:
I think the email that you are referring to was a mistake and I did not
perform any magic.
At 00:00z----- 17:00 my time the ui-mailer sent out a report. It was not a
scheduled report but it
seems at that time, it clears the station list and sends a email to the

recipiant on the first line(I am at work and I don't remember the lines
title) not the one on the scheduled line (second line). I had my own email
address on that line so hence I received the email, not the group. Sooooo, I
forwarded the email to the group and viola, fixed pitch. I hope that clears
things up a bit.

Rich,
I thought of that too. I managed to find the place to shove a folded wad of "postit" paper between the
pot and the side of the case. This seams to be working for time being. probably will fail later.
Removing the pot for replacement would necessitate remove the front panel from main board. Fine pitch
soldering of perhaps 100 solder joints. NO THANKS.
I'll use on my old Motorola speaker boxes it I have to got that way!
Anyway, I am back (lurking) on 28.131 for the time being.
Thanks,
Wayne, KE6AJE

Yes, I run APRS 24/7 on 53.530, AX.25. Also run a cross-band digi, anything that comes to my station with any path left goes out on 6, hopefully someone will hear it again -- "some day"! <G>

I can't help with the HTX-10 question, but you should know that Jesse in Florida has just agreed to activate on 6-meters. You may see an RF source from him within the next 60-days or so. I've been off the air for the last month, but will return shortly myself.

What would a 6 meter setup cost if I add it to my existing station?
I'd need: TRX, antenna
I have: PC with "relatively" free COM port, TNC.

Can I use UIView to interface with a COM port while I'm using the DTR line
(PSK31Srv) on that same port to run my BEACONET^31 (28 MHz) PTT?

I'm considering...

Also: in the light of that Jan 02 QST article on "how to build your own PC",
I may do just that in the beginning of next year. A 200 MHz Pentium is
actually kinda slow...

In addition: I have a "spare" Toshiba laptop here and I am thinking about
doing some B^31 experiments with it. Or maybe use it for 10 meters...

Last: I started writing (but never quite finished) a UI-View utility (to run
in the RCOMMAND directory) that you can use to query the BEACONet^31 status
(stations heard, last heard, how often, etc.) using the messaging
functionality of my APRS station. That way I could run UIView at work and
issue queries (over the internet) to my station to see "who's there". This
sounds like a good first step. Later, we could think about writing an SMS
interface (if you have VoiceStream service or Cingular/PacBell in the US)
that would allow you to do SMS queries of the status from your mobile phone.
But that's still a little out in the future...

Rendered body type: text/plain

Hi,

I will be off the air starting tomorrow afternoon until December 30. I will
first be travelling to Sweden for business, followed by X-Mas back home in
The Netherlands. I'll attempt to set up a station from there (the equipment
is there... but I need to see if there is any PSK31-suitable cabling between
the PC and the TRX) using the callsign PA3GTI or PA3GMK (my father/mother)
in order not to confuse the logs we are running.

In the mean time, I think I will leave my station running here RECEIVE only
in order to collect some decent amount of data. That way I can update/expand
on the propagation article I was attempting to do last November, but that

never finished.

I will continue to monitor this mailing list on a daily basis as I will have
my laptop with me...

All the best wishes for Christmas / ... (insert your favorite end-of-year
holiday here) and for the New Year as well...

Hello Everyone:
I have switched from my 746 to my unused HTX-10.
I am anxious to see my reports to find how it is working.
Any reports on my signal will be appreciated.
The new setup should be able to be on the air continuously, the next
change will come when I put up a vertical antenna.
At that point, there should be no need for me to take the station off
the air at all except for thunderstorms.
I dunno what happened today as I only picket up one intercept.
See Ya'll later.

```
I have no way of telling the software which font to use for the outgoing
mail.  This is determined by each individual email client.  If the catch
reports are sent via the SMTP channel, then baring any magic from your ISP,
it should be sent as plain ASCII text.  If the catch report is sent via the
MAPI channel, then the font of the message will be the font set for outgoing
mail in the senders email client.  I believe most email clients can also map
the incoming messages to a proportional Font, Eudora is capable of this.  So
far the only catch reports I have seen in a proportional font are those sent
by the TA station in Turkey.

Rendered body type: text/plain

Hi Ramon,
6-meters is a bit of a "fuzzy" target, due to many things. It is a band
that would allow simultaneous .25 comparisons at 53.530-FM and
50.450-USB as well as ^31 operation at 50.431-USB. At present, the
activity is AX.25 on 53.530-MHz FM (a universally clear channel in all
of IARU Region 2 and most of Region 3 -- with exhaustive research in
support).

The least expensive commercially manufactured way to get active is an
Alinco DR06-TH for around $250 brand new. It will give 15-20 watts of
output. This is what N2VRJ will have shortly (I'm giving him one that I
had laying around, unused).

In actuality, Buck (K4ABT) sells re-channeled service-pulls for alot
less (with higher power output, too). See more information at
http://www.packetradio.com. I would suggest that, unless one has a
radio already, an eMail to mailto:k4abt@buxcommco.com inquiring about
one of the units that he modifies and sells "ready for TNC" is probably
in order. He even sells a cheap ground-plane antenna, though a vertical
dipole will work quite well, if one has the means of supporting it. I
use the driven element from an abandoned 6-meter yagi.

As for your question about...
> Can I use UIView to interface with a COM port while I'm using
> the DTR line (PSK31Srv) on that same port to run my BEACONET^31
> (28 MHz) PTT?

I'd doubt it, as I'd think that one would need to take control of the
port, in order to control the data lines...but go ahead and give it a go
(or ask Roger). :o)

Given all of the DX that 6-meters has enjoyed lately, I'm rushing to get
that station re-activated again, personally. I'm hoping that -- with
activity in New Mexico, Florida, New York (and now possibly Mass.),
along with summertime activity in Arkansas, we can start to establish
the network to track this stuff again.

Ev, W2EV

Actually, once a program grabs a COM port it is considered in service and
another program can not use that port. What I would do is use one COM port
with UIVIew and another with PSKSrv. If a lack of COM port is a problem,
they sell those expansion boards for less than 20 bucks and you even get an
extra LPT port.

You can also add an interface like the Tigetronics SignaLink that uses a VOX
circuit to key the radio without using a COM port. I've been using one for
several months and haven't had any problems.

Since I switched rigs last nite, I see no one on my catch report except
myself.
Is my setup not working, did everyone stop transmitting, or did I miss
something important here?
I am at work so I can not look at my setup to see what's up.
I did turn on my IC-R10 to listen and there is a bunch of CW going on
because of the contest.
Is that the problem? Are you all having the same results?

Hi Dane,
I'm betting that the contest has created enough QRM to disrupt BEACONet
operation. We'll know for sure if the catches start again tomorrow.
Ev

303. [propnet] My Reports

From: "Burns, Dane" <DaneBurns@hersheys.com>
Date: Mon, 17 Dec 2001 13:16:23 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52459-2001.12.17-12.45.01--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

```
Now that I have everything about settled down, a VOX circuit built for my
HTX-10
to trigger the PTT and so-forth, I see my reports are very confusing.
After studying them for a bit, I see that I have my computer set up for a 12
hour format.
So it logs all catches from 1 to 12 and then goes back for the next 12 hours
of the
day, adding the new catches on to what is already on the first 12.
I will fix this when I get home from work tonight.

Thanks to all for the help the past few weeks.
CUL
Dane-WI3X

Dane

make sure the Time format in the regional setting is set for HH:mm:ss.  This
will acertain that the form is infact 24 hour format.

313. [propnet] BEACONet.25 test

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 18 Dec 2001 07:25:33 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52560-2001.12.18-06.56.08--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Now that I have UI-Mailer working (and I'm helping some locals get
active as VK-BEACONet RoverTrackers), I'll be camped on 28.128 for a
while. It will be interesting to see how (or if) the ability to decode
an AX.25 packet is much different than that of PSK31 in a side-by-side
trial.

Please...keep sending your [CATCH] reports to the list. This stuff is
fascinating...especially as we approach NA's "shortest day of the year".

Ev, W2EV

Rendered body type: text/plain

What am I missing in my setup.
I am running pk31serv,ui-view (16 bit), and UiMailer Version 2.1.1.x.
On my UiMailer ver 1.73 I report my azm and dist as 0 and 0.
But on my UiMailer Version 2.1.1.x report My azm and dist are 237 and 268.

Thanks again
Dane-WI3X

Check the grid square in the configuration, in the Mailer (2.0) and re enter it. I compute, mailer version 2 thinks you are in FM09RH by that bearing and distance. The gridsquare you see in the catch is the actual grid square that was transmitted by Ui-View.

Jeff

Rendered body type: text/plain

```
This is really weird, Mailer2 seems to have failed to restart at
00:00. As you can see in my report that I just sent in, it is
logging  right over the previous day. Any thoughts as to why?

Jesse

331. [propnet] BEACONet.25 and ^31 Comparison

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 18 Dec 2001 23:19:31 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52653-2001.12.18-22.50.06--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

```
... This eMail is best viewed in a monospaced font ...

Thanks to Dane (WI3X), we have our first comparison between AX.25-based
BEACONet.25 and PSK31-based BEACONet^31 operation throughout the day,
today.  It's an interesting read, but a difficult direct comparison, for
several reasons (notice the differences in power levels noted in the
configuration code).

Still, fascinating. :o)

For the sake of the readers on the HF Beacons listserve, a quick recap
of what you are about to see...

                              |---Time (UTC)---------|
                               Number of times the station
                               was received, in Base(36):
                               1=1, 6=6, 9=9, A=10, B=11,Z=36

==== PSK31-based BEACONet stations on 28.131 USB+1500hz PSK audio ====

Notice the number of W2EV self-catches increased while K9ER was
propagating?  This is related to the ability for the .25 system to
```

digipeat. Also...notice the gap in propagation? It was captured by
both systems. The reports seen above are automatically created by
N7YG's UI-Mailer version 2 program. I simply combined them for the
purposes of this eMail.

335. [propnet] Once-a-day reports, please

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 19 Dec 2001 06:16:44 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52688-2001.12.19-05.48.56--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi Folks,

A single [CATCH] report is all that is needed each day, from each
participating station.

Please check your "send times" and assure that they are occuring only
once each day...when sending to the list. If you need more than one
report, be sure to use the feature that Jeff built into his program for
sending an interim report to an alternate (other than the general list)
eMail address.

Thanks!

Ev, W2EV

336. [propnet] Experimental interest in 6-meter USB?

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 19 Dec 2001 06:54:42 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52692-2001.12.19-06.28.28--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I'd like to run the January Quads meteor event on 6-meter USB (50.450 @
1200 baud AX.25) as an experiment. While it has the potential for a
couple of rocks/minute, the velocity is relatively slow (only 41
km/sec).

Still...I'd like to find out what, if any, issues pop-up by using USB,
rather than FM. Is there any interest in joining-in?

Ev, W2EV

Sorry for the excess reports, I wasn't sure what you all were looking for.
I will change this when I get home today, so you will still see the ones at
noon today.
Also. I have changed my configuration code from HY0G13 to HY0E02.
Hoe can I get my beacon to report HY0E02-15, I can not get the -15 in
Ui-View (setup-APRS Compatibility)
as I can only input 6 characters.

Subject: [propnet] Once-a-day reports, please

Hi Folks,

A single [CATCH] report is all that is needed each day, from each
participating station.

Please check your "send times" and assure that they are occuring only
once each day...when sending to the list. If you need more than one
report, be sure to use the feature that Jeff built into his program for
sending an interim report to an alternate (other than the general list)
eMail address.

Thanks!

Ev, W2EV

338. [propnet] Should subject specify topic category of emails?

From: Jerry Flanders <jflanders2@home.com>
Date: Wed, 19 Dec 2001 10:38:57 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52717-2001.12.19-10.07.43--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

If we started using a specific phrase or ID string in the subject header ot
the reflector emails, we could self-sort those reports on the receiving
end, allowing those of us who have specific interests to better cope with
the large volume of emails on other topics on this reflector.

For instance, I am very interested in "conventional" FM 2M/6M BEACONet
meteor work, but have zero interest in trying to see if 10 M is open, or in
comparing FM vs other modes.

ID'ing messages could also allow someone to automate a data
collection/evaluation system from his received emails if a specific format
was always followed in the body as well as an ID in the subject.

Some are using "CATCH" in their (auto-generated?) reports, which is a step
in this direction.

I am not sure what categories and sub-categories we need, so I do not have
a specific proposal at this time. I am just wondering if everyone thinks
this would be useful to them.

Hello, All,

I suspect I am late to his dialog but here goes.

I see the article about MFSK16 in the January
QST.   Several weeks ago we were instructed

on another mode that has certain advantages.
And, of course we have the momentum of
PSK31.

Has anyone looked forward to the likely
ultimate outcome of all of these opportunities?
Is there a committee somewhere that is
weighing and sifting?

73,

Ed

Mine will be back on Dec. 30. I do have my RECEIVER running, but I cut all
transmissions while I'm out.
I'm going to build a cable between my laptop and the TRX tomorrow, so with a
little bit of luck you should be able to see PA3GTI from [JO20XV] tomorrow
during your day. I'll see if I can send once a day manual reports by email.

My home station doesn't email since I my email mechanism isn't stable enough
to keep it running unmanned.

We decided on the [CATCH] subject ID for (mostly automated) Beaconet
reception reports. This is relatively well-followed thanks to the
implementation of it into UIMailer by Jeff Steinkamp, the author of this
wonderful piece of software.

I saw this too. It would be interesting to implement this stuff. If only
Roger Barker would give free the source of PSK31Srv, so we could build upon
the existing framework.

If not, we should start from scratch and implement what we need. Start
looking for a good programmer (I know one who has done a lot already for us,
but he's probably really busy supporting the rest of the programs that we
use. Jeff, how hard is writing something like this?)

Thanks, 73,

Been playing around witht he PSKCORE.DLL, the engine behind post PSK
terminal. I have a very primitive multi channel receiver that I am testing
currently, but adding multi-modes and condensing the package into one
program will take a lot of work. My major concern is the availbality of
Windows resources.

DSP, FFT caclculations and TCP platforms are all resource hogs are really
require strict memory management to keep from running our of resources.
With each new release of the Winders OS, this become more and more
impearitive as these OS's have their own resource problems and memory leaks.

If we decide to develop a unique PSK platform for the needs of BeacoNet,
then we must first come to a consensus of what the minimum requirement are.
Do we want to continue to interface to Ui-View or implement those features
of Ui=View that we use into an all-in one software package?

351. [propnet] Re: [CATCH] N7YG BEACONet^31 - 12/19/01 21:37:01

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Wed, 19 Dec 2001 16:24:51 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52772-2001.12.19-17.53.36--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

The time on this catch report are not correct. They should be adjusted to
reflect UTC time. I was testing and forgot to change the UTC offset.

Jeff

361. [propnet] More .25 : ^31 personality comparisons

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Wed, 19 Dec 2001 23:02:54 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52826-2001.12.19-22.33.32--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Of particular interest is a comparison between the 28.128 MHz
AX.25-based W2EV/KD5CFB path and the 28.131 MHz PSK31-based WI3X/KC5DUI
path. They are roughly equivalent in geography, and distance...and RF
output / ERP.

Interestingly, AX.25 seems to hold it's own quite nicely, as far as
decoding ability. The band opened and closed at approximately the same
time...with a slight advantage to AX.25.

Not knowing what the beacon rate is for KD5CFB or KC5DUI, it is
difficult to estimate a "catch efficiency", but at first blush, it looks
like there is yet another possible advantage to AX.25.

All of this seems to fly in the face of conventional wisdom (that says
PSK31 is a vastly . Of course, one day's worth of data does not make a
trend. This is, of course... f-a-s-c-i-n-a-t-i-n-g. :o) Let's see what
we get over the next several days.

Ev, W2EV

Hi, Ev, et. al.

Hey, it is great to see that experiment going on.

If it really turns out that there is not a clear
advantage to one mode over the other in
side by side experiments with due adjustment
for powers/gains, etc. then we need to toss
that finding back to the folks who have
concluded on a theoretical basis that there
should be.

Not an exact analog, of course, but I am
reminded of a comparison of an old analog
cable system against a new digital cable system
where we were told that the digital system
would be so much better than the analog.

Three years later, the analog system is still
giving residents more consistant service than
the digital system.   Thank goodness we did
not disconnect the analog system, as a
matter of fact.

73,

Ed

Hi guys,

I got my laptop running BEACONet^31. Please comment on signal quality. I am
hearing N2NVJ and WI3X loud and clear here...

QTH is Heerlen, Netherlands, JO20XV.
TRX = TS850
Output around 75 Watts
Antenna 2 elements quad at 115 meters ASL, 15 meters HAAT.
PC = Thinkpad T20 (P3/700, 128 MB RAM, etc.)
no soundcard interface, direct connection using VOX. Seems to work OK.
config code = HY0G13-11

Again, please comment on signal quality if you can! Feel free to send me a
Short Message instead of an email if you need me to change the setup
urgently here. Go to http://messages.to/ramon.kolb to do so.

365. [propnet] More on PSK31 versus AX25

From: esack <esack@pacbell.net>
Date: Thu, 20 Dec 2001 08:32:42 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52866-2001.12.20-10.56.44--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi, All,

An additional observation is that our equipment
is probably not optimized for PSK31. My guess is that
if the radio designers took a look at what they
would put into the receiver signal path for the newer
"quasi-digital" modes versus what they put in
to make the rag-chewers happy, they would
either make some significant modifications
or add some serious new features.

Another issue. Unless there is some
patent problem, I cannot
understand why I can buy a rig with a built in
TNC but not a built in GPS. Seems to me
that that combo is so obvious. Further, why
cannot I buy a rig with the "quasi-digital"
mode decoding built in (and yes, I know that
there is equipment that goes part way there
made by a German firm.)

If you look at QST, it seems that the new modes
of modulation are happening around the ARRL
rather then being championed and standardized
by the ARRL. Maybe that is an unfair observation.

73,

Ed

Hi Ramon,

According to the emails I've received from my radio computer this morning, I
had copy on you from 1507Z to 1609Z (UIMailer v1.73 sending). Will have to
see what UIMailer2 shows for statistics when I get home tonite. Glad to see
you were able to make everything work!!

Bob - KC5DUI - EM26WE

377. [propnet] BEACONet Comparison: .25 vs ^31 on 12/20/01

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Thu, 20 Dec 2001 23:46:58 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-52926-2001.12.20-23.17.43--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

```
Edited CATCH reports of similar paths today.  I'm going to back down to
"E" level power tomorrow, just to make things more equal (ERP-wise).
I'm stumped as to why the advantage appears to belong to AX.25
operation.  There must be something I'm missing.  As can be seen below,
the band "opens" earlier, and "closes" later.  Interestingly, when
signals propagate on both modes, though...PSK31 gets through more often
(today, anyway).  Fascinating!

Ev, W2EV

Hi, Ev,

Maybe you have already solved your problem but
some time ago when I was considering having my
KPC3+ with software version 8.3 interface with
both the GPS and the PC, I checked my
approach using a document on the
"www.dididahdahdidit.com" site which advised
in detail as to how that submitter got his setup
working, software and hardware wise.

I made the cable per instructions but then never
had the need to have the GPS and the PC
tied to the TNC at the same time so I never
confirmed the instructions but you may well
want to copy them down if they are still on
```

the site.

73,

Ed

W3NRG

Small clarification: 12:40 is 12:40 EST, the "standard time" of my laptop...
This was around the time that the band closed.

Rendered body type: text/plain

For the past few weeks I have been working on a replacement for PSKSrv. I think I have put together a program that will function as well as Roger's program with a few added features. Roger no longer support this software and will not provide the sources for further development. So I have toiled and boiled and produced a single channel PSK terminal that I think will meet the need of BeacoNet and PSK31. Check out the webite at http://home.earthlink.net/~n7yg/psk.htm

Click the link at the top to download the program. The ZIP file contains 2 files, PSK31Test.Exe and PSKCORE.DLL. Place the EXE file in the directory of choice. The DLL file is provide as a replacement for the current PSKCORE file you may have. It should be placed in the Windows/System directory. Before doing so, check the file dates and retain the file with the newer date. You can also place the DLL file in the current directory. This file MUST BE in your environment path to be located when needed.

On the first run, set up the configuration page. I have setup some defaults, but you will need to set callsign, grid square and configuration code. The web site has an explanation of each configuration item.

Functionally , it is the same as PSKSrv. I have added a transmit scheduling feature that will eliminate the 'pouncing' we get at the top of every ten minutes. The is the platform I hope to expand on to provide a multi channel receiver. I want to see how this single channel one works on the various platforms.

Actually all the distances are screwed up. Check the distance for jesse's
station. I think he may have is own grid in the configuration file
incorrect.

Jeff

Ed,
The problem that I'm fighting with involves the use of a KPC3plus with a
GPS on Second Serial, used along with UI-View.  The website doesn't help
there, I'm afraid.

Once I figure it all out, I'll include instructions on the BEACONet
site, though. :o)
Ev

392. [propnet] Distance problem corrected

From: Jesse L Carroll <n2vrj@home.com>
Date: Sat, 22 Dec 2001 01:35:48 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53052-2001.12.21-20.04.09--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I believe I have the distance problem resolved. I had EL86tx and
replaced it with el86tx. Seems to have eliminated the problem.
Thanks for pointing that out.
By the way, if anyone noticed my beacon missing from about 22:00
til 01:31, the credit goes to my my neighbors wonderful children.
Apparently the knobs and buttons were more than they could resist
playing with. :(
Please let me know if I am too far off the 1500 mark. It can be a
little tough to hit with this HTX-10. Thanks

Jesse

If you have downloaded PSK Server, do not install it yet. While
troubleshooting another problem I discovered a nasty security hole that I
need to plug. Not as bad as the XP hole, but serious enough that it warrants
immediate attention. I'll try and have this ready for deployment after
Christmas. Sorry about that, but I don't need the hackers invading your
computer.

397. [propnet] New psk server comments

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Fri, 21 Dec 2001 22:50:04 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53088-2001.12.22-01.30.48--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

This certainly looks very nice. It'll be great to have a psk server under
development within the group.

The registration command is "regsvr32" not "regsrv32" as you all have
probably discovered.

The spectrum display is great. The scan range seems a little narrow ...
especially for those of us with HTX-10s, which are kinda hard to set within
the last 200 Hz or so. Is it easily set?

I get "Undefined error: code 3" all the time (Windows NT 4
SP6). Unclicking Tune or TX always does it, and sometimes it just pops up
by itself.

Thanks, Jeff!

A POOR Comparison! I noticed that my OS clock lost over 2-hours (parts
of a 3-hour strech of "self catches" seem to be missing, too)! I will
be exploring the reason for that today (which has me puzzled).

I now know why I have a three-hour gap in "self-catches". Somehow, the
setting for timezone changed from Eastern to Pacific. Has any other
user experienced this happening to them? I leave by BEACONet computer
up 24/7. Could there be an unanticipated interaction between UI-Mailer
that I'm unfamiliar with?

I dragged my feet in responding with the hopes that you'd get some
replies. I'm frankly stumped as to why we've had such dismal return on
our meteor mode work. After several years of fairly good reports, the
last couple of showers were extremely poor.

At first, I thought it was because we included our eMail addresses in
our transmissions (and folks were sending direct QSL's). Now...I think
that we've started experiencing an interesting phenomena that may have
not been documented before...it's just that we don't know what it is. :o))

I'm scratching my head, too.

Dave

I guess you did not get the divide by zero errors, so the registry entries
seemed to work ok on your machine. Beware there is a hole that is developed
when a client disconnects from the server. I am fixing that as we speak
while the XYL is braving the last minute shoppers at the mall. I wont see
here until later this morning.

The regsrv was a typo. I am going to an installer program that will
correctly install the DLL and OCX files, register them with the system and
create the initial registry entries.

The error you are getting decode to the following and is not really an
error.

    "Is finished transmitting remaining characters in buffer and any CWID"

This is a Windows message sent from the DLL any time there is a status
change. I was not handling this message as it is really not an error. It
looks like NT will handle a message if the window does not handle it. I
will get with author of the PSKCORE.DLL and ask him about that.

Which build of NT are you using? I will need to take that into account with

the installer program I am using.

The interaction with UIMailer is possible. I am making a change to dump the
timezone correction routine I have in the mailer and use the Windows API
Time Zone Bias function I discovered the other day. This will eliminate
that from the software and allow windows to handle the timezone corrections.

Hi Rich,
I'm noticing that 10-meters is starting to "shorten" a bit lately. I've
not seen South Texas for a couple of days. Likewise, I'm seeing you
digipeated through KD5CFB, too.

406. [propnet] Re: PSK Server testing

From: RickfordG@aol.com
Date: Sat, 22 Dec 2001 11:14:35 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53112-2001.12.22-10.43.26--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi Jeff

I am running PSK Server and PSK31svr side by side on separate computers but
the same radio. PSK Server is recieve only.

So far I find your program to be a real gem! Ramon has been coming in sense
early this morning and has been a good test beacon. PSK Server locks on to
Ramons beacon much faster and starts decoding while PSK31svr is bumped up to
it and is wondering it should do next.

The error message (I think it is #3) only pops up when PSK Server tries to
transmit. The program keeps running. Remember this computer does not have any
to transmit.

Mailer (latest version) connected to PSK Server flawlessly and is happily
doing it's thing. I had to get my regional settings right so starting at
16:00 Z I will be able to see if one program or the other actually catches
more BEACONet beacons.

If you would like me to try something with this dueling computer set up just
let me know.

I am not worried about the security problem. The computer that PSK Server is
running on ony has Ham junk on it.

Rich

Rendered body type: text/plain

Getting good copy on PA3GTI from the Netherlands beginning at about 16:00 UTC.
I don't know how why I get such a strong signal because I am using a G5RV type dipole oriented with its
axis pointed such that a polar arriving signal would be off the end! Is it possible it isn't an over
the pole signal here in cal.

Rich

This is wonderful!!!. I was going to try something like that, but I just
can't get the xyl of her computer to try something like that. The scan
basically looks for the highest signal peak between 1400 - 1600 Hz +/- the

AFC range (max of 50). I was having a log of difficulty with Roman
yesterday, but I think that may be my location. The signal was strong, but
there was a lot of fluttering and signal degration, at least here in sunny
Southern Arizona where snow is a four letter word!!!!!

As for the error 3, I have sent a query to the author of the PSKCORE.DLL
file, but I think it is only telling me the tx buffer is empty, in which
case I will handle that in the status bar.

Let me know the results of the side by side test.

Thanks

Jeff N7YG

Jeff, I think that when the error message comes up the program Does stop but does Not crash. Clicking off the error message sets things back in motion. I will check this again later today.

So far I am quite excited about PSK Server. It looks like it will blow PSK31svr out of the water.

Question: I have 0 minute checked in the "Transmit Sector" thinking that the program would not TX. Yet, it transmits every 15 min. Have I misunderstood something here?

Idea: What it be possible to have program set up with the ability to Say, Scan down from 1500 Hz and up at the same time?

Rendered body type: text/plain

The verdict is in!

Jeff's PSK Server Is the flat out winner :-))

It looks to me that PSK Server fills the BEACONet at least twice as full. I have pasted the catches in there entirety below so you all can judge for your selves.

More testing is required but, At first glance I would say that the Mega preamble in no longer needed. The scan speed is much faster. Lock on is precise and Quick.

My Hat is off to you Dude!

I have noticed the same thing. On Wednesday I was hearing N7YG and K9ER,
along with you and KD5CFB. On Thursday I heard K9ER, you, and KD5CFB.
Yesterday I only heard you and KD5CFB.

Today, so far, nobody is popping up on the map well into the usual 10m
opening time slot to the south. Although today I did hear an ER4 station
(Moldova) on 28.430 around 1600z. Seems like the band may have gone long,
and east west.

Too bad we don't have more AX.25 stations distributed east and west, it's
pretty much a north-south distribution in a slot about 500 miles wide.

Rich

413. [propnet] Re: PSK Server testing

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 22 Dec 2001 11:46:39 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53132-2001.12.22-13.15.34--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

The program is always set to transmit a beacon, in your case if you have the transmit sector set to 0 then you are set to transmit your beacon every 15 minutes at 0, 15, 30, and 45 minutes past each hour. The time slice determines if you will transmit between 0 - 29 seconds or 30 - 59 second after the selected Time Sector. I did not add a feature to disable the beacon, but if we feel this feature is needed it can be added with a problem. Set the PTT control line to none and let me know if that get rid of the error code 3. I'm now pretty sure this is not really and error and will handle that with a statusbar message.

As for the Idea: That would require setting up multiple channels. Once I do that I will set each channel to scan between it's upper and lower limit with each channel being 50 - 75 hz wide. Before I implement something like this, we need discussion on how many channels (the fewer the better for resource conservation), how wide and how much spectrum to we want to occupy. I would like to stay within the 1200 - 1800 HZ range. Will also need input for those using the HTX-10'sas they can only set the frequency to say 28.131 and rely on that offset control to get on frequency.

Jeff N7YG

Question: I have 0 minute checked in the "Transmit Sector" thinking that the program would not TX. Yet, it transmits every 15 min. Have I misunderstood something here?

Idea: What it be possible to have program set up with the ability to Say, Scan down from 1500 Hz and up at the same time?

>Wayne KE6AJE

This is interesting, I just replied to Ev about observed propagation today, and the usual North-South path seems to have gone East-West. Today, about 1600z I was copying an ER4 (Moldova) station on 28.430, just blasting in.

415. [propnet] Observation on decoding of strong signals

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Sat, 22 Dec 2001 12:08:45 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53141-2001.12.22-14.39.29--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all,

I've spent some time this morning watching both psk31srv and Jeff's new server. I'm not hearing many signals on either today, but I have seen the same thing happen often enough to make a definite comment about it.

It has to do with decoding of strong signals. I have one setup with the new software on listen-only. Say it happens to be listening on 1460 Hz when a strong signal (my other station, which does beacon) starts transmitting on 1500 Hz. It seems to be trying to decode at 1460, never finding out that the peak is at 1500. It makes a total mess of it, of course. If I click to set it on 1500, it does fine. Even if I click FARTHER AWAY, either at 1410 or 1550, this seems to wake up the scanning feature, which then has a much better chance of finding the peak.

This happens with both psk31srv and psk31test, and so I wonder if it's a consequence of the pskcore dll code. Any can anyone else confirm it?

Incidentally Jeff, the error code 3 always occurs at the end of a transmission.

Dave

Rich,
What North-South path? I never see that from my location!!! I have seldom copied your station (but perhaps three or four times) and due to my antenna orientation your station is almost full on broadside to the G5RV. I don't get propagation from that distance, about 1000 km for some reason.
I also have never seen So. Cal or Washington stations via normal Beaconet ops. Again I suspect that's because of my antenna.
As for East-West propagation, that is all I ever see from here, the east coast, and today for the first time Europe! Cool!!!
I have a Force 12 C3S antenna, (10, 15 & 20 mtrs) (in the garage in a box, dah) to install when I can find the time and inclination, ha, ha. Have to do it while the XWL is not looking! That will help some.

417. [propnet] OT : Fw: Blonde's cookbook

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 22 Dec 2001 15:19:29 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53143-2001.12.22-16.48.16--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I dont noramlly send OT humor to a list, but this is really great. My XYL, a blonde, actually sent this to me. Great stuff!!!

Blonde Cook Book

MONDAY:
It's fun to cook for Bob. Today I made angel food cake. The recipe said beat 12 eggs separately. The neighbors were nice enough to loan me some extra bowls.

TUESDAY:
Bob wanted fruit salad for supper. The recipe said serve without dressing. So I didn't dress. What a surprise when Bob brought a friend home for supper.

WEDNESDAY:
A good day for rice. The recipe said wash thoroughly before steaming the rice. It seemed kinda of silly but I took a bath. I can't say it improved the rice any.

THURSDAY:
Today Bob asked for salad again. I tried a new recipe. It said prepare ingredients, then toss on a bed of lettuce one hour before serving. Which is what led up to Bob asking me why I was rolling around in

the garden?

FRIDAY:
I found an easy recipe for cookies. It said put all ingredients in bowl and beat it. There must have been something wrong with this recipe. When I got back, everything was the same as when I left.

SATURDAY:
Bob did the shopping today and brought home a chicken. He asked me to dress it for Sunday (oh boy). For some reason Bob keeps counting to ten.

SUNDAY:
Bob's folks came to dinner. I wanted to serve roast. All I could find was hamburger. Suddenly I had a flash of genius. I put the hamburger in the oven and set the controls for roast. It still came out hamburger, much to my disappointment.

GOOD NIGHT DEAR DIARY:
This has been a very exciting week. I am eager for tomorrow to come so I can try out a new recipe on Bob. If we could just get a bigger oven, I would like to surprise him with Chocolate Moose.

418. [propnet] Error Code 3

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 22 Dec 2001 15:22:36 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>

Rendered body type: text/plain

Just got an email from the author of the PSKCORE.DLL and the error code 3 is
actually a normal message function indicating the transmit function is
'finishing up' and returning to the receive mode. I will port that message
to the status bar in the next release.

Dave
This may not be a fair test as you are transmitting so close to each other.
The other factor is the AFC range. If the range is set to 50HZ, then the
DSP is within the AFC range and it inhibits looking for a peak and tries to
fine tune at that point. If the signal level is quite high, it may have
difficulty trying to distinguish between a signal peak and actual FFT data.
We'll need further testing to actually determine what's happening.

Incidentally, I have copied bits and pieces of your signal yesterday, but
not well enough to pass a CRC check. So there is a bit of propagation
between CA and AZ.

423. [propnet] PSK Server and Mailer version 2

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sat, 22 Dec 2001 17:30:10 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53152-2001.12.22-19.01.41--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have plugged the security holes in PSK Server. To do so required some addition code handling within Mailer Version 2. Do not use the previous versions if you have a connection to the internet. Delete both programs prior to installation of the updated versions.

I eliminated the error window that was causing the display of the error 3. This is a normal windows message and will be displayed in the status bar.

I eliminated the timezone flap in mailer. There is a TimeZone function buried in the Windows API and I am using that to compute UTC based on the setting of your regional setting.

All initialization data is being handled within the Windows Registry. During the installation, default values are written to preclude any possible problem during the startup of either program.

I have packaged both programs into a self installer that will install the programs, set the registry entries, register the DLL files, create the Program Groups, install the short cuts on the Desktop, make dinner, walk the dog and determine the whereabouts of our Boy Bin Laden and So-Dumb-Insane!!!!!!

I have rearrange my web site and added an index at the main page. Here is the link http://home.earthlink.net/~n7yg

Let me know if you have any problems, especially the NT users.

Jeff N7YG

Hi Jeff,

Have deleted the old versions and installed the new ones and everything seems to be working fine (nobody to copy during the evening/night!). Don't know what time slot everyone else is working with but I've picked "8" and "00-29" for now.

Will try to keep an eye on this for the next couple of days to see what is happening.

GREAT programming!! If it works on my old P90/64MB it should work anywhere! When you implement the muliple receive feature will it be possible to pick how many receive windows to use? Not sure how well this old machine would keep up with too many stations at one time.

Once you get this installed on the old machine and running along with at least the Mailer program and maybe Ui-View, let me know how the resource consumption is. I'm looking at 5 to 7 channels depending on how resources go. 5 channels will give us the ability to get 300 stations assuming we have synced our time sectors.

Running PSK Server, Mailer version 2 and UIView32 I'm showing:
    System Resources - 78% Free
    User Resources - 78% Free
    GDI Resources - 85% Free
according to the WIN95 "Resource Meter"

The WIN95 "System Monitor" shows Processor Usage holding at about 6% with Peak Value at 10% (UIView32 minimized and PSK Server displayed). With UIView32 showing and PSK Server minimized usage shows about 1%.

To synch our time sectors I guess we need to add another item to the
BEACONet Web Page where you "register" for a time and frequency spot.
Interesting challenge is going to be "calibrating" the system so we all have
the same starting point for frequency offset.

Great to hear... I have been hearing West Coast here on a daily
basis.... today my best DX is Jeff's station (N7YG). N2VRJ and WI3X are
heard on an ongoing basis during "normal" band opening hours (12:00 ~
18:00 UTC more or less. I heard a Swedish station (but without CRC)
partially a few days ago, has anyone in the US had any copy on him?

I am running about 75 Watts from a very good station here, using a TS850
and a 2 elements 3-band homemade quad at about 45 ft. above the ground.
Total antenna height is about 135 meters ASL. Using my laptop for
transmitting, so sorry if you once in a while heard me dial into my
internet provider :-). Station is TRX VOX controlled, and not
galvanically separated from the computer. I had some troubles getting
the PTT to work, and I stopped trying when I figured out that the VOX
works fine.

I'll keep the station up and running until ~Dec. 29, after which I will
go back States-side and reactivate my station there.

Talk to you soon and happy hollidays to you all!

Rich,
What North-South path? I never see that from my location!!! I have
seldom copied your station (but perhaps three or four times) and due to
my antenna orientation your station is almost full on broadside to the
G5RV. I don't get propagation from that distance, about 1000 km for some
reason.
I also have never seen So. Cal or Washington stations via normal
Beaconet ops. Again I suspect that's because of my antenna.
As for East-West propagation, that is all I ever see from here, the east
coast, and today for the first time Europe! Cool!!!
I have a Force 12 C3S antenna, (10, 15 & 20 mtrs) (in the garage in a
box, dah) to install when I can find the time and inclination, ha, ha.
Have to do it while the XWL is not looking! That will help some.
Wayne, KE6AJE

This is interesting, I just replied to Ev about observed propagation
today, and the usual North-South path seems to have gone East-West.
Today, about 1600z I was copying an ER4 (Moldova) station on 28.430,
just blasting in.

I'vew got a total of 9 hits between 1500 and 1800Z. I gues that's when the band folded between you and me. BTW I will be sending the antenna tuner out on Wednesday. You should see the line at the post office this week. I guess everyone is either in the post office or K-Mart!!!

Great to hear... I have been hearing West Coast here on a daily basis.... today my best DX is Jeff's station (N7YG). N2VRJ and WI3X are heard on an ongoing basis during "normal" band opening hours (12:00 ~ 18:00 UTC more or less. I heard a Swedish station (but without CRC) partially a few days ago, has anyone in the US had any copy on him?

I am running about 75 Watts from a very good station here, using a TS850 and a 2 elements 3-band homemade quad at about 45 ft. above the ground. Total antenna height is about 135 meters ASL. Using my laptop for transmitting, so sorry if you once in a while heard me dial into my internet provider :-). Station is TRX VOX controlled, and not galvanically separated from the computer. I had some troubles getting the PTT to work, and I stopped trying when I figured out that the VOX works fine.

I'll keep the station up and running until ~Dec. 29, after which I will go back States-side and reactivate my station there.

Talk to you soon and happy hollidays to you all!

Rendered body type: text/plain

Hi Jeff,

So far the the new PSK Server program is doing quite well but I have noticed something that I can't explain. Am running the original PSK31Srv and Mailer version 2 on another computer in the monitor mode (both will send out email at 2359Z - one shows PSK31Srv after my call and the other PSK Server so you can see the results) and it is picking up KF6XA on a regular basis. I can see KF6XA's signal on the computer with PSK Server but it does not scan up or lock on to his signal. If I click on his signal on the tuning screen the bar jumps up there but then drops back without decoding. Watching the tuning window on PSK Server, scanning seems to be in the 1300 and 1400 ranges. KF6XA's signal shows at about 1620 on the displays.

Currently I have the scan feature scanning between 1400 - 1600 Hz plus the AFC range which default to 50 so with this setup you should be scanning between 1350 and 1650. The waterfall display is between about 1300 HZ and 1700 HZ. I am looking into expanding that to something on the order of 1000 Hz to 2000 HZ. I may also add a configuration item to allow the user to select the scan range.

Thanks a lot... if you send it to my work address, I will see it on my
desk when I come back on Jan. 2nd... so send it lowest-priority there
is, speed is no problem :-)

Thanks for your good werk on the PSK Server.... I haven't downloaded it
yet but I will 1st thing when I get back home!

Merry x-mas,

For some reason W3NRG is not howing up on this post. I did receive that
station quite well during the 2000 - 2300 with an average of 3 catches per
hour. May have to look into the software and see what has happened.

Rendered body type: text/plain

```
Hi, Folks,

I was really busy this week with a new assignment
and did not get around to checking your reports on
my signal until this afternoon.

What I find is that my station apparently quit
transmitting as early as last Monday.   Every
once in a while, the PSK31srv program keeps
sending the data to the transceiver but the
keying signal from the computer quits.

My fault for not checking sooner but W3NRG is
a 24/7 PSK31 BEACONet station and if you
find me missing at some point in the future,
please "yell!"

73,

Ed
```

Hi Jeff

I am running PSK Server, UI-View, UI-Path and Mailer. My computer is a
Pentium 200 MMX, 48 Megs of ram. Windows reports Recourses: 63% free.

Rendered body type: text/plain

Hi Bob,

This afternoon (23 December, noon to 4pm Pacific), I had exceptionally good
copy on you (and only you). At that time, I had the HTX-10 audio feeding
psk31srv on one computer and PSK Server on another. It is quite touchy to
adjust the audio level, as the noise goes from nothing to moderate in only
a few degrees of twist of the audio level knob, and I have the volume
control on the desktop set quite near the bottom.

At any rate, I got 100% copy on your signals, after the first few
characters, on the new PSK Server for at least an hour. On the old
software, it was almost as good. Again, this was a quality of copy I don't
usually see on anyone's signal.

[BTW Jeff: How about some sort of timestamp in the display? Right after
the transmission would be good.]

During this time, I was screwing around with setting the audio level, so
there were some times I was transmitting unmodulated carrier, and sometimes
strings of single letters. This went on for only ten minutes or so, on and
off, and I don't remember when ... possible around 3pm PST. ALSO, I have
more power since yesterday than I had before, as I was able to turn up the
mic gain until the output power stopped increasing, so it is possible I had
more IMD. I have now backed this off just a hair; see how it looks tomorrow.

Regarding frequency: I haven't changed the setting in a long time on the
HTX-10. The "fine tune" knob, which nominally centers at the 12 o'clock
position, is at about 1 o'clock, a position I reached with W3NRG's help a
while back. I calibrate by setting the DX-70TH to 28131.0, aiming for
halfway between the .9 and .1 points, and when I do this, the HTX-10 now
appears to be at 1508 Hz. Admittedly, most signals seem to be below
mine. I wonder if anyone can supply a closer spot.

73

I have installed PSK Server, and everything seems to running
smoothly. It will be interesting to see how often my beacon is
heard, (percentage wise) transmitting only 4 times per hour,
compared to 12 times per hr before. I guess we shall see.

Jesse

Jesse makes an interesting point. In order to understand the circuit
better, it would be nice if we somehow knew how often each of us was
transmitting...to know how often (as a percent of TX's) we were RX'd.
It's too bad there wasn't one more byte in the config code. :o)

Rendered body type: text/plain

I have temporarily removed PSK Server from the web site. Late last night I
found a problem in the development program that may have been distributed to
the web site. If you have downloaded PSK Server anytime after 2200Z on 23
Dec 2001, please run a virus scan on the individual file in the distribution
file pskserver2setup.exe and in the directory it was installed.

I am trying to determine what happened on my end and ascertain there is not
a problem with the distribution before I re-post it back to the web site.
If you find no problems, then you should be OK. If you find something,
please let me know exactly what you found.

I believe something came riding in along with the Microsoft Security Update
I installed yesterday around that time. Go Figure!!!!

Hi all,

Had a few problems with my system over night. For some reason PSK Server stopped decoding or transmitting during the 0000Z hours. Scan was still moving and stopping on signals but not decoding or transmitting my signal. Exited the programs (PSK Server, UIMailer2 and UIView32) and then restarted them and all appears back to normal. I did forget to put the I/F back in the xmit mode so I didn't transmit anything until about 1838Z. My second computer running PSK31Srv and UIMailer2 decided to freeze up during the 0700Z hour so don't know what happened after that - it did show plots on N2VRJ and WI3X during the 0600Z time period which is unusual.

Currently have both systems running again - PSK31Srv has found PA3GTI and KA2ENE that haven't shown up on the PSK Server yet. Will try to watch (have presents to wrap!) and see where they show up in the spectrum. Just saw PA3GTI at 1620Hz and KA2ENE at 1571Hz and PSK Server never seemed to notice them while PSK31Srv locked on during the preambles. KF6XA is plotting today - seems to be around 1540Hz.

451. [propnet] PSK Server and Mailer

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Mon, 24 Dec 2001 14:49:54 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53338-2001.12.24-16.18.49--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have rid my computer of the problem that came riding in along with
Microsoft's so called security update. What ever it was damaged the a
PSKCORE.DLL file and my have been included with a previous distribution.

I have uploaded version 2.11 of PSKServer and 2.114 of Mailer2 to the web
site at http://home.erathlink.net/~n7yg.

The recommendation of adding a time stamp in the terminal window of PSK
Server is not feasible at this time. The catches that are sent from the
server to the Mailer, if your are using the latest version, are time stamped
as they are sent to the client. This will require Mailer to be a client of
PSK Server. This time stamp will be in local time and is a function of the
Windows API. It uses the local time from the server computer to timestamp.

I have looked at this and feel it will eat up to much processing time that should be devoted to tuning signals. I will look at this further and see if I can find way to have the windows message services perform this operation.

I am still interested in some side by side comparisons between PSKServer and PSKSrv especially with weak signals and the normal preamble. I think there may be a problem with those extremely long preambles some are using. The model requires the interception of a carriage return character, ASCII 13, to delaminate the beginning and end of the beacon text. I have noticed that those who have the extremely long preambles may be overwriting the <CR> that separates the preamble and the beacon text. Therefore, when it comes time to compute the CRC we are computing a CRC based on the beacon text and the preamble.

I have also been experimenting with audio levels from the sound card. I have found that the lowest audio level that will give a very small amount of noise to establish a noise floor will provide the best results. On my particular installation, my audio from the rig comes from a high impedance, low level output for accessories such as phone patches and data outputs. If you have one of these, I highly recommend using this output instead of the normal speaker output and connecting it to the line input of the sound card. With no signal other than the normal background noise, you should see one green LED marker on the input level control in the Windows Mixer panel. In the Waterfall display you should se an almost even mixture of black background and green noise.

The PSKCORE.DLL establishes the signal level as a ration between the peak of the signal and the ambient noise floor. The lower the noise floor, the faster the capture of a signal.

Jeff N7YG

Hi Bob
My Beacon quit to the only difference in the set up is no UI-View. Looks like
it shut down in the 23:00 hour. I have mailer send the Station table to file
at that time.

Hi Jeff

I receive only one beacon "Ramon" with a long preamble and have no problem
with it. The <CR> must still be intact.

<you should see one
green LED marker on the input level control in the Windows Mixer panel>

I had to turn the volume level down on my rig and set the sound card so one
green and flickering the second.

Worth mentioning again. It looks like PSK Server is shutting down during the
23:00 hour.

Also I had to go back to the second latest version of mailer. My computer
clock is set to Z not Local. Looks like I am the odd ball in the group. LOL.
AOL, and computer clock set for Z.

Happy Holidays to all
Rich

Thanks to Bob for forwarding a days' worth of comparisons to ponder.
Here's my take on the two systems from this dataset (which seems to have
a hole in the PSK31 Server data from 0100 to 1500, when there were no
self-catches...inferring that his system wasn't running at the time.
Therefore, I'd not compare the two systems during this timeslot.

I'm fascinated by the band opening 12-hours before (or after) it's
"supposed" to...for an hour or two. What other system would know that?
:o)

Other than that, draw your own conclusions with a single day's worth of
data, but I'd suggest that it will take several days worth of data to

normalize a comparison between the two systems. Even then, the two
systems should be "swapped" after the first series (and the test
re-run), to assure that the computer that they're running on isn't
introducing an unexpected variable, too.

Still...a thought-provoking study. Well done Bob and Jeff and group!
Ev, W2EV

Rendered body type: text/plain

Hi Jeff and Rich,

I just downloaded the latest PSK Server (2.11) and UIMailer (2.2.1.4). Both
seem to be functioning just fine. I like being able to adjust the scan
range - seems to be doing much better and covering the whole range. The
previous version of PSK Server shut down during 0300Z hour this morning
(Christmas) (on the 24th it shut down during 0000Z hour) and for some reason
my clock was about 89 seconds off this morning (have reinstituted my
scheduler for checking the time every three hours).

My computer clock is also set to Z - what was the problem you noticed Rich?
So far it seems to be working just fine.

Bob - KC5DUI

Rendered body type: text/plain

For some reason PSK Server isn't talking to UiView or mailer. I
kept seeing it decode stations but never send them to the other
programs. Switched back to PSK31srv, until I can figure out why.

Jesse

467. [propnet] UI-View/16 Software update available

From: Ev Tupis <w2ev@rochester.rr.com>
Date: Tue, 25 Dec 2001 10:27:41 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53402-2001.12.25-09.58.37--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Just a quick note to say that version 2.38 is a necessary upgrade, if
you haven't applied it yet. It allows you to correctly set your
configuration code for PSK31 operation.

Versions before this don't allow the -15 (SSID) in the "APRS
Compatibility" window (what a misnomer <smile>), which causes UI-Mailer
some difficulty.

The program should be "get-able" from our website at
http://go.to/BEACONet.

Best Wishes, everyone!

Ev

Hi Ev,

The hole in the data on the PSK Server Catch was due to PSK Server not transmitting or decoding, scan was still moving and stopping on signals but nothing printing out. Same thing happened this morning (Christmas) but at 0300Z instead of 0000Z. Jeff has a new version of PSK Server that I'm running now so will see how it goes. The hole on the PSK31Srv Catch was because of a complete computer lock up - have seen random lock ups on this computer, sometimes after more than two weeks of 24/7 without rebooting, sometimes after just an hour or so (doesn't lock up while I'm using it just when it is sitting - have all the "energy-convservation" items turned off as well as the screen saver and blanking so I can see what time it happened). I really like Jeff's new software and think it will be a GREAT help it avoiding "stepping" on each other and still getting the most copy.

Bob - KC5DUI

Hi Bob
The station table was plotting the hits in the wrong Time slot. The time at the bottom of Mailer was off. If I have time I will try up grading both programs today. Ill check to see if I am using the latest versions first.

If you have an earlier version of PSK Server or the Mailer, this maybe to
problem. I've also had problems with UI-View as it does not send the
disconnect signal properly. I think this is cured with the newer version.

Jeff

I have seen one signal right behind the other decode with PSK Server. I
believe that you have a good plan.

You all come early and get a good seat ;-)

Running PSK Server, UIMailer2 and UIView32. I have UIView32 set up to exit
at 2359Z then a scheduler program brings it back up after clearing the
snapshot/bin files.

Merry Christmas all. This came via the WSWSS listserv; perhaps you know
someone you'd like to set up on BEACONet.

This morning I'm hearing Ramon in PA fairly clearly.

73

Dave

Same here.... heard you OK until 17:21 UTC (last copy). The band is still
open to the East Coast (8 PM local time here, it has been dark since 4:30
PM) but for how much longer?

This might be a problem especially if you have an XTR file that runs PSK
Server or the mailer. There is a problem I have noticed with UI-View. It
does not appear to correctly send a disconnect signal to the server it
attached to. If you use an XTR file to launch PSK Server, you will need to
select the ON button after it starts. I will look into adding a command
line argument that will start this function. Keep me posted if this
continues.

I do not use XTR file. I down loaded latest version of Mailer and Psk Server
today and installed. After starting PSK Server I had to click the on button.
After starting Mailer I clicked PSK Server and it connected to it then
disconnected. A short time later it reconnected. This went on for a while
then I decided to click Other "without changing anything" and the program
settled down and stayed connected to PSK Server. This was about 3 this
afternoon. I just got home and found that Mailer and PSK Server quit again. I
wanted to see if PSK Server was really running so I clicked the Transmit
button and it worked. A second later my beacon went off?

  WD4RBX

  PSK Server must be running and ON prior to launching the Mailer. IF you quit the server, then the Mailer will attempt to connect every 30 seconds until it satisfies a connect..

  How exactly is PSK Server and Mailer 'quiting'? are you getting any error information? Is the waterfall still running in PSK Server? If you get the venetian blind effect in the waterfall, try clicking on the speaker icon and open the RX level adjustment, then close the mixer window. After it quits, do you still see activity in the spectrum display above the control buttons?

  Next time it quits, take a look at the task window and see if the program has stalled. You can access this by doing the ctrl-alt-del thing. Also look at the amount of resources available and compare that to when you started everything.

  Jeff N7YG

493. [propnet] Email Test

It's that time of the year to clean out the dead address from the address
book. No reply is necessary as the returned email from the servers will
indicate the dead addresses.

Happy Holidays
Jeff Steinkamp

Hi Jeff

Yes, PSK Server was running before I launched Mailer. I cant explain how they
are quitting. It looks like they both are running normally. PSK Server, s
Spectrum and water fall display look normal. The programs respond to clicks.
No error messages. I will do the > Ctrl-Alt-Del thing next time and let you
> know what windows reports.

503. [propnet] PSK Server lockup's

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Wed, 26 Dec 2001 20:33:39 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53567-2001.12.26-22.02.37--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Instead of trying to answer the individual emails concerning the lockup
everyone has been experiencing, I will address all these issues, I hope,
with this email.

I also experienced the lockup as evidence by my recent catch report.
Sometime around 1600Z today the server locked up on me. I ran about 40 hour
before the lockup occurred.

I am not sure exactly what is happening, but I suspect it has to do with the
amount of data that resides in the terminal window. I did not set a limit
to the number of lines allocated to the terminal window, so the sky is the
limit depending on the amount of memory available on your machine. With
Rich's (WD4RBX) meager 64Meg, he was maxing out quite quickly. I have 256
Meg, that is why it took longer for my machine to max out. The amount of
memory allocated for this control is managed by windows.

I have implemented a function that will check the number of line in the
terminal and if it starts to exceed 35 lines, then it will start deleting
lines, starting at the top, until it reaches less than 35.

I am currently testing this to make sure it will function correctly. In the
interim, I would suggest right clicking the terminal window from time to
time and using the clear function to clear the window of data.

Jeff N7YG

Hi all,

Lost my automatic report from both computers this evening. They had a
couple error messages from UIMailer2 which said something about already
connected (I know I should have read them but was on the way out the door
and was in too much of a hurry). Reset the time on the computers so

UIMailer2 thought we were back on the 26th and sent the files to the
clipboard (sure am glad Jeff has the info being saved in the MEM
file!!!!!!!). I'll switch the computers around this weekend so I can see if
the faster computer (the one running PSK31Srv at the moment) has an impact
on the copy ability. I no longer have UIView32 running since PSK Server is
handling the transmission and reception just fine.

Welcome to K9OHI!! Both computers received him at almost the identical
times.

Rich Parry's METEORegistry page is now open for business. Visit
http://go.to/METEORegistry to show others "where the action is", making
aiming your antenna that much easier (thanks again, Rich!).

I am still seriously scratching my head over the lack of MS returns in
2001. Personally, I've had equipment failure for the past two, but I've
seen only very limited successes posted to the list from others. I'm trying
to figure out what changed (and if it is something under our control or
not).

Even so..."no data" tell us something...I'm just not sure what it is. :o)

I would like to run on 50.450 USB at 1200 baud for this one (as a further
test). So far, only one other station has suggested that they'd join me

(thanks, Earl!). The distance between us is not real good for MS work...so
we could use a couple more participants. If we don't get 'em, I'll move
over to 147.585 MHz with the rest of the crowd.

Kindly,
Ev, W2EV

Good morning, fellow BeaconNet-ers.

Thanks to all for the reports.

After initial testing on top of workbench, I have taken my beacon down for a day or so in
order to make the installation permanent. Have to do some rearrangement of computers,
antennas, and rigs. Should be back up 24/7 shortly.

How do I do UiMailer? I am presently using Ui-View 16-bit demo, but plan to register 32-
bit version today. Is mailer a function of 32-bit program or is it separate application?

Looking forward to joining you permanently in couple of days.

73 de Tom, K9OHI.

>Organization: ALPOMS, AMS, & IMO
>X-Mailer: Mozilla 4.61 [en]C-AtHome0407 (Win98; U)
>X-Accept-Language: en
>To: Meteor Alert <meteor@skypub.com>
>Subject: AstroAlert: Watching for Quadrantid Meteors
>Sender: owner-meteor@skypub.com
>
>The Quadrantid meteor shower is expected to peak near 18:00 Universal
>Time on January 3, 2002. This time corresponds to the early evening for
>European locations, mid-day for North America, and the early morning
>hours for eastern Asia. This shower is also known as the Bootids since
>the radiant position at the time of maximum activity lies in a remote
>portion of northern Bootes. Star charts at the time of this shower's
>discovery (1825) listed the constellation of Quadrans Muralis in this
>position hence the name "Quadrantids".
>
>This shower is of short duration lasting only 5 days. It reaches a
>zenith hourly rate of 1 on January 1. Rates remain low until only a few
>hours before maximum activity on January 3. At this time rates will
>climb steadily with rates nearly doubling each hour. The actual maximum
>is short-lived and rates plummet just as fast as they climbed. Rates
>will fall below a ZHR of 1 on January 6.
>
>One must be in the right place at the right time to see the Quads at
>their best. In over 35 years of viewing I have only seen the Quads at
>maximum activity only once. Of course clouds and bright moonlight have
>also been a factor in trying to see the Quadrantids. The Quads at
>maximum activity are an impressive sight with rates surpassing 100 per
>hour and many fireballs being seen. We thought we had another

>opportunity to see such activity in 2001 but the maximum arrived late
>and the best rates were only 50 per hour as seen from the Mojave Desert.
>
>With a peak predicted near 18:00 UT the western Pacific areas are
>favored in 2002. Japan, the Korea's and eastern China are favored
>locations. Should it again arrive late then points further west will see
>the best activity. It should be noted that locations west of the
>International Date Line will see the best activity on the morning of
>January 4, not the 3rd.
>
>Unfortunately this year the moon will be 80 percent illuminated and will
>be above the horizon during the entire morning. If your sky is clear and
>transparent you should be able to see some Quadrantid activity. This
>situation will be somewhat similar to the 2002 return of the Leonids on
>November 19. This will be a good opportunity to see just how well you
>can see meteor activity with a bright moon in the sky. The Quads are
>bright like the Leonids and some activity should be visible despite the
>moon's glare. To see any activity it will be essential to face away from
>the moon toward the north or northeast. Look high enough in the sky so
>that none of your field of view is wasted on the ground.
>
>On January 3 the Quadrantid radiant lies at 15:20 (230) +49. This area
>of the sky lies below the horizon for locations south of latitude 35N at
>the dusk. One would have to be located north of 50N to see any decent
>evening Quadrantid activity. One good factor about early evening
>observing is that the moon would be below the horizon. At 18:00 UT the
>areas of Scandinavia, Scotland and Iceland may be able to see some good
>Quadrantid activity with the moon below the horizon.
>
>The radiant reaches it lowest point near 8:00pm (20:00) local time for
>all locations. At this time the radiant elevation ranges from +21
>degrees for those located at latitude 60N to -59 degrees for those
>located at latitude 20S. At midnight local time the radiant ranges from
>+30 degrees for those located at latitude 60N to -31 degrees for those
>located at latitude 20S. Prime time for viewing the Quadrantids is 1
>hour before the start of morning astronomical twilight. This time ranges
>from approximately 6:00am (0600) at 60N, 5:00am (0500) at 30N, 4:15am
>(0415) at the equator, 3:30am (0330) at 20S. The approximate radiant
>altitude at these times will be 68 degrees at 60N, 47 degrees at 30N, 17
>degrees at the equator and -5 degrees at 20S. As you can see there will
>not be much activity to be seen from locations south of the equator.
>
>The Quadrantids strike the earth at a velocity of 41 kilometers per
>second. This is a bit faster than the recent Geminids but much slower
>than the Leonids. Like all meteors, the Quads will appear to move slowly
>if see near their radiant or near the horizon. If see far from the
>radiant and high in the sky they will appear to travel more swiftly.
>Quadrantids will only occasionally produce persistent trains.
>
>The parent object of the Quadrantids is not presently known. It could be
>an undiscovered comet or asteroid. It is also possible that the parent
>object has completely disintegrated and that the Quadrantid meteoroids
>are all that remains.
>
>If you wish to do more than just watch, then it is useful to know that
>scientific data can be obtained by simply counting the number of
>Quadrantids and non Quadrantids seen. The start and ending times should
>be recorded along with any breaks taken during the observing session.
>Shower association will be easy as the Quadrantid meteors will all have
>parallel paths and come from the same general area of the sky. They will
>also have a similar velocity as seen within your field of view. Non
>Quadrantids (sporadics) can travel in any direction at any velocity. If
>you are familiar which the magnitude system it is also helpful to list
>the magnitude of the faintest star you can see in your field of view.
>Typical urban estimates should be near +4.0 with the bright moon in the
>sky. Rural skies are better at +5.0 and higher. If you are really
>enthusiastic then you may wish trying to record the time and magnitude
>of each meteor seen.
>
>Meteor reports can be sent to me at: lunro.imo.usa@home.com and to Sky &
>Telescope at: observers@skypub.com
>
>For more information on observing meteors visit the Sky & Telescope Web
>Pages at: http://www.skypub.com/sights/meteors/meteorwatch.html

Hi Ev

I am going to look into running my PTT line from my TNC to the 6 meter brick.
You might not remember but my 6 meter rig is shot and only puts less than a
watt. If the PTT line to brick works I will have 25 watts and 6 elements to
use. Ill let you know if I was successful later today.

Hi Tom

Here is a link to Jef's web site. You can find Mailer and PSK31 Server there.
Jeff has a good explanation of what the programs do and how to use them.

Its now a setup file and will install over the top of what you have, but will not destroy your registry
settings. When checking this out, I may have inadvertently change some timing on the scan routine. Let
 me know if you feel the scan is working better or worse than before.

Hi Skipper

Got the PTT working for the brick. Now 25 watts (if the rig gets happy the
out put will go to 90 watts but I dough that will happen) and 6 elements on
6. also have the solar power backed up (do to old batteries) and can run
24/7. Let me know when to fire up. This experiment should be interesting.

Hi Jeff
I Uninstalled and reinstalled earlier today. It really was not a problem. I
think that the scan is different such as it acts like PSK31svr when it bumps
up to a strong signal. Let me pay better attention and Ill get back to you.

Hi all

I just left the Meteor register web site (you auto go it, s shocking) and would you all believe that we have only 3 folks signed up to participate. Maybe it, s just to early to see the folks that plan to participate? I know that you all are chomping at the bit to see if we (experimenters) can figure out what happened during the last meteor STORM and we had NO hits.

I need to know If I need to fire 2 meters too? It's a stretch but, I can do it.

Thanks, Ramon. Yep, new to BeaconNet. Have it up and operating now. Still having problems with Ui-Mailer--keep getting error message when it tries to parse--but I'll figure it out.

Rendered body type: text/plain

My PSK Server Catch report for today will have a hole for the 2000-2300Z timeframe. Don't know what happened but the nothing was being passed to UIMailer2 or being decoded but it appears to have kept transmitting right on schedule (will be looking for other reports to see if I was heard during that period). Am going to download the new versions shortly and have them running for the 28th.

The computer with PSK31Srv decided to do it's own thing today and went in to never-never land at 1339Z after I'd left for work. It will have a hole from 1339-2344Z (keeps things interesting). Might have to reload this computer if I can't beat it into submisson.

Hope everyone is having fun!!!

Bob - KC5DUI

Just a quick note...
PSK31srv (the one on the BEACONet website) is "tried and true"...but with some limitations. I would suggest that newbies to the BEACONet project stick with that for the time being. We know its quirks and work with them.

Jeff's PSK31 Server program is under development. While it holds *incredible* promise for our future, it is probably not a good starting point for newcomers to the BEACONet project (yet).

Believe me, though...once we get it humming...it *will* take over. :o)

By the way...I'm very happy that development is taking the "layered" approach. While PSK31 is the modulation method of choice today...it is probable that even more efficient codec's will be made available in the future. Keeping the PSK31 Server seperate from UI-View will allow us to progress as technology does.

Well done, Jeff! Excellent vision.

Kindly,
Ev, W2EV

```

```
Hey, Li'l Buddy,  <smile>
I'll power up on the evening of January 2nd on 50.450 USB.  I'd love to run
on January 1st...but I'm afraid of all of the TVI complaints from the folks
watching Dick Clark. :o)
```

Anyone else care to join us in the experiment?

Ev, W2EV

PS...the experiment deals with the use of USB rather than FM. I wonder if
doppler will so skew the tones as to make them undecodable or not. FM
doesn't have this problem because the audio tones don't change there...just
the FM carrier frequency (or at least I think that is what happens). :o)

Skipper
Any chance we can bump the frequency up a bit? I have computer/Compact
Florissant light hash on 50.450 it drops out at 50.452 to 455. It's not that
bad but it does keep the DCD, LED lit on the TNC.

Tell you what. Fire up in RX mode on the first and Ill let her rip.

Rendered body type: text/plain

Hey Rich,
I'm thinking it would be good to solve the QRM/N problem on 50.450, but I'm
certainly open to moving frequency. Right now...I'd like to simply know if
USB is a viable MS mode, more than anchoring on a frequency. How about
50.550? Any higher in the band, and we risk alienating future SSB/CW folks,
by virture of having a high SWR.

Wa-da-ya think? <g>

Hi all ---

I'm off for Maui tomorrow, and hope to have something going on 28.131 by
Saturday 1900UTC or so.

The location isn't the greatest, as I think the horizon changes from flat
to mountain about 040 degrees, and the US is more like 065. Plus, it'll be
just my luck to get an ocean-facing unit .... wait a minute, I'm not that
fanatical a ham.

73 and aloha

The only thing you're nuts about is flying into Buffalo to get here (such a
wackie little chappie that you are). Not to worry...we've hired a sled-dog
team to pull you to Rochester.

The good news is that there aren't any brush fires, hurricanes or insect
swarms on the horizon and my Leonids Twins are anxiously awaiting their
tall, blonde and handsome (well, two out of three ain't bad) uncle from
South Appalachia, Florida. Whooooo Hawwwwwww!

Love 'ya Bro, and see 'ya soon.

<with a big grin>,

Ev

Hi Ev

I agree on all accounts. I have found the problem to be one of my ham shack
computers. So far staying on 50.450 will be OK. I haven't tested the CF
lights yet. I will just use one computer instead of 2. Most likely I will
shut the ten meter beacon off till we are finished with the experiment.

Looks like we can work meteor mode in a new way. Thanks Roger ;-)

CHNGE166.TXT says - "A START_METEOR_MODE command added to the Schedule
Editor. See the Schedule Editor help for more information."

If you press F1 with the editor open and read the help, at the end of
the help page you should find this -

"START_METEOR_MODE <number> - enable meteor mode for this number of
minutes. <number> must be between one and 30. If you wish to enable
meteor mode for more than 30 minutes, then you can use a series of
"START_METEOR_MODE 30" commands, with times separated by 30 minutes."

When you drop down the Event list in the editor, the last option is
START_METEOR_MODE.

Didn't I just read in the paper where Buffalo got about 4 million inches of
SNOW????

When I retired from the military and returned to the US. I picked up my car
at the port of entry, strapped a snow shovel to the front and drove south
until some chap asked me what it was!!! Hence, the Tucson, AZ address!!!!!

I see the band is a bit later opening up today. Been watching the waterfall and I can see a faint signal, but have been unable to lock on. I suspect the idiot CBer's I have down the band by 500HZ are also causing a bit of problems with the scanning mode.

Since I changed the limit to the terminal window to 35 lines I have not seen any lockup on this end. Has anyone else had a lockup using the changed software.

I have made a few more changes that will help the scan a bit. I replaced the S meter and squelch threshold with a better implementation. It also provide a Boolean value to indicate open or close which saves of a few lines of code.

I have also added the common vector display as a nice visual of the signal phase relationship.

I moved the scan sample timing back to 1000ms to allow for a better capture.

I corrected the path problem with the help file and it should now located the help file in the installed application directory.

Windows provide a multitude of different formats for display of date and time. In order for UiMailer and PSKServer to function correctly, you must have the time format set to HH:mm:ss. Do not enable the function that allows the masking of the leading zero. Kinda of defeats the whole purpose of 24 hour time.

Yes, I will admit a good programmer will be able to program around these 'features', but the more 'features' I must program around, the more code I generate and that eats up more memory. It seems that one now requires at least 128mb of memory to run much of today's software on a windows platform. Gone are the days when programmers were more concerned about memory than the user interface. Memory is cheap.

Just as a comparison, I have a Learjet Full motion and visual flight simulator I maintain that is running on an old DEC PDP-11/55 computer (1978 era), programmed in assembly language, and the complete program is memory resident in 64K (yes, that 64,000 bytes) of memory. The visual runs on and old Varian V-77 with 32K of memory.

Amazing how we have progressed.

Jeff:
Thanks for all the hard work. Everything is going well on this end although
I am not at home to see my display but the reports I am receiving at work
look fine.
The computer I am using is a old one that I "upgraded" last spring to a
Pentium 133.
It only has 24 MB ram and I have not seen any trouble with the new release
as of yet.
Yesterday I had quite a bit of electrical noise in my area which sometimes
happens during cold weather, I was at home and despite the noise, everything
looked fine.
A quick question about your time slot idea. Your plan is great but when I
originally became interested in BEACONet, I had planed on putting my
transmitter on continuously but to only monitor on occasion.
If I do so, I will not be in sync with the time slots and wonder if this
would still be a benefit or a detriment to all others collecting data?
Thanks again

552. [propnet] Re: Band Today

From: tomplichta@home.com
Date: Fri, 28 Dec 2001 12:53:53 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-53870-2001.12.28-12.22.59--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Jeff,

I downloaded PSK Server V2.0 but have been unable to get it to run.

I keep getting an access violation alert when it starts to load and then it just dumps.

Thought maybe it was incompatible with Win 2000, so I tried on Win 98 machine--same
results.

Downloaded it twice to make sure I got a good download.

Any ideas?

73 de Tom, K9OHI

Dont bother...everythings closed up tight. 6' of snow. You wont find
anywhere to go or stay and no transportation is functioning.
Do yourself a favor, stay away.

Well I'm shutting down till the 8th. I sent my final report for
today , moments ago.
Thanks for all the words of encouragement on my crazy journey
north. (If it ever quits snowing long enough to get there) I
must have had my head up my butt when I booked this flight. Who
flys into Buffalo in late December. Oh well, cya all soon

Hi Ev & All

I am ready, I think that I can keep my 10 meter beacon going during the
shower. I am testing tonight.

Ev, If you can you might want to change your 6 meter rig to 50.450 USB AX.25.
I am going to run Meteor mode. I want to be sure that I can put a reliable
signal on the air and who knows I just might hit a random meteor. The receive
is fixed.

Hey, Rich,
Based on your previous problem with 50.450, the rest of my communication
with other folks has centered on 50.550 instead. Rather than
re-communicate, can we just QSY to .550?

How soon are you going to start?

Ev

Hi Dane (and group),
I know your question was aimed at Jeff...so this is just a short chime-in on my part.

Assigned time-slots is a very cool idea, but problematic because it relies on manual coordination and accurate system clocks. I'm of the opinion that we are best served by spreading out in frequency, and letting PSK31srv or PSK31 Server's scanning/multi-channel decoding do the job of capturing and decoding.

I'm also of the opinion that we should re-coordinate our TX times to every 6-minutes. This would provide 10-catches an hour, and we'd be able to calculate our % receptions easily. Again...normal clock drift and spreading out in frequency would do the job of assuring good decode. Speculation on

my part...but it seems to work in my "mind's eye". :o)

Ok Skipper!
I am on 50.550. all looks good! in fact I added a chemical (to improve) to my
batter bank about a month ago and it is working. Not the best choice, but one
I can afford.

Rich,
Are you operating now? If so, I'll come off of 147.585 (where I've been
providing a signal source for some local BEACONet experimenters) and
power-up on 50.550.

Ev

Yes, Testing the setup. I am TXing in my time slot and then some. 15 for 30.
Looks like it is a drop in the battery bank bucket.

Get a load of this. I just talked to a JA station (25 watts & 5/8 wave
dipole) that told me that 6 Meters has been open to the West cost US. Yep! I
did in form him of BEACONet

Hi all

Sorry but I cannot access the data on my ham shack computer until I shut down
some programs. When I try to send the data to my A: drive all I get is junk.
I can tell you all that Bob KC5DUI came in again today. This is quite
unusual. Maybe it signals some kind of DX change?

Well it happened again, When I compiled the latest version of the install
file, it did not pickup the new DLL file even though it passed the integrity
test. I just downloaded the install binary and sure enough, the damn file
ain't there!!!

I have manually loaded the file back to the binary and established the
registration process and reposted the setup file back to the web site.

I have tested this on the XYL's computer and it installs correctly and the
uninstall also works.

I have registered for the Quad shower and will be up on 50.550 starting today, Not sure if I'll have any success, but will give it a try. Tried to find the command to get the scheduler to put UI-VIew into meteor mode, but don ot find that. I think Rich ran that a few day ago, but my archives are not here.

Right now I am pumping out a beacon every 10 minutes or so.

578. [propnet] [CATCH] KC5DUI Interesting Bob But!

From: RickfordG@aol.com
Date: Sat, 29 Dec 2001 06:27:45 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54031-2001.12.29-05.56.53--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Bob and the group

I did not notice this yesterday but guess who is missing from your catches?
Good Ole RBX. I live about 300 miles North,west of Tom. Looks like the band
was just a little long for me.
Rich

579. [propnet] scheduler to put UI-VIew into meteor mode

From: RickfordG@aol.com
Date: Sat, 29 Dec 2001 06:34:22 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54032-2001.12.29-06.03.28--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

In a message dated 12/29/01 01:23:44 Eastern Standard Time, n7yg@arrl.net
writes:

> Tried to
> find the command to get the scheduler to put UI-VIew into meteor mode, but
> don ot find that. I think Rich ran that a few day ago, but my archives are
> not here.
>

In article <a.179a2987.295dca2d@aol.com>, rickfordg@aol.com writes
>What are the commands for schedular to start and stop meteor mode? I checked

>the help files and did not see anything about it. It is mentioned in the
>readme file.

CHNGE166.TXT says - "A START_METEOR_MODE command added to the Schedule
Editor. See the Schedule Editor help for more information."

If you press F1 with the editor open and read the help, at the end of
the help page you should find this -

"START_METEOR_MODE <number> - enable meteor mode for this number of
minutes. <number> must be between one and 30. If you wish to enable
meteor mode for more than 30 minutes, then you can use a series of
"START_METEOR_MODE 30" commands, with times separated by 30 minutes."

When you drop down the Event list in the editor, the last option is
START_METEOR_MODE.

580. [propnet] Re: Beacon Question for Jeff (N7YG)

Jeff,
No, what I mean is just the beacon data say once every 4.5 to 5 min.

Dane WI3X

Dane

What exactly do you mean by continuously?? Are you talking an endless loop
of transmitting data?

Jeff N7YG

Take this as a very rough estimate for now. The prediction models for the
Leonids (back in November) are much better because they have been studied
for much longer and by more people. Even so...

Hi all,
since my power failure 2 weeks ago, I had no time to repair the TRX, sorry. I also had many problem due to frost here (-15 C°) and many pipes in my garage have exploded! So you understand where are my urgent priorities.
I hope to come back soon with a new TRX on HY band.

For Ev, it seems after watching the news that you also have a lot of snow in Buffalo area...

Concernind Beaconet convention 2002 in Denver, I think I will join you for some days.

Hi Ev and All

My 6 Meter stuff checked out OK last night. I am ready to rock.

Ev, I was wondering, Do we have a FREQ for PSK31 on 6 meters? I was thinking
(OH NO!) that it might draw some BEACONet interest. Beyond that I would love
to play ^31 on 6.

```
Hi, All,

Dave, KF6XA reports by phone that he is
"on the air" from Maui.  His room/antenna is
west facing, first floor, which does not favor the U.S.
of course but, heck, this is 10 meters.

I have not recorded him yet but maybe some of
you guys with the "dream QTH's" have.

73,

Ed

W3NRG

599. [propnet] Report from Hawaii

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Sun, 30 Dec 2001 01:27:47 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54148-2001.12.30-03.57.27--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Sorry to say I don't hear anyone here, and from reading the daily reports
the reverse seems true too. The location couldn't be much worse for
radio. The hotel is about 300 feet long and ten stories high. It's
oriented E-W and I'm on the 2nd floor in the SW corner, about 15 ft MSL ...
and North America bears about 068, directly through ten floors of steel frame.

The antenna is just a railing-mounted vertical, too.

Hawaii is great as usual.   I hope to get an opportunity to set up in a
park for a while, and I am planning at least one visit to Haleakala, where
the HAAT is about 8000 feet and there's a clear view to the Northeast.

73

Dave

600. [propnet] The 6-meter plan

From: "Ev Tupis (W2EV)" <w2ev@arrl.net>
Date: Sun, 30 Dec 2001 08:28:13 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54165-2001.12.30-07.57.21--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Notwithstanding the significant advantages that BEACONet.25 holds on 53.530
MHz (and the additional activity that will be built there shortly) and the
USB meteor tests on 50.550 USB, BEACONet^31 is probably best homed at 50.531
USB (following the convention that we've established on 10-meters, anyway).

Of course, with no real established psk31 activity on 6-meters yet,
according to Part 97 it is allowed *anywhere* except 50.0 to 50.1 (where
only CW is allowed).

Hi Ev and the group

When it comes to BEACONet.25, I am with you all the way. I do plan to join
the group on 53.530 after the meteor shower. I have been playing around and

found that my 6 meter rig is happy at 53 MHz and want to see if it will stay
that way. I already built a J-Pole (last fall) and have it at 30 feet. If the
rig craps out I am going pick up one of those MFJ data radios.

I should have been more specific when talking about BEACONet^31 on 6 meters.
A friend of mine has one of those MFJ SSB rigs and it works wonderfully
camping. I can't remember what the freq range is, May be 50.00 to 50.300/400?
A bit short for BEACONet^31 on 6 meters. I was thinking that the MFJ SSB rigs
would be easy to find and in expensive. To be truthful with you all I don't
want to start something that will split up the group on 6 meters. My money is
going on 53.530. I can't wait to see how this is going to work.

I'll be up on 53.53 starting this evening after 10 dies out and run on 6 meters AX.25 through the
evening for the next few days. Might be able to catch something.

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54195-2001.12.30-11.26.49--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have been working on a mulit-channel receiver and have the framework for a 10 channel unit with the channels spaced 100 Hz starting at 1000 Hz and working up to 1900 Hz. Each channel will search 50 Hz either side of the center frequency for a peak and fine tune it by 20 Hz. I am currently using this and I have copied multiple station at the same time through the three clowns on CW at the present time. Their center freq is about 1200 Hz.

I have implemented the transmit function to transmit just on 1500 HZ and can only be triggered by UI-View at the present time.

If you would like to beta test this on your installation, send me an email and I will forward the install file. Need to know if this is going to work on machines with smaller amounts of memory.

Did I miss something? Are you talking about operation for the meteor shower or just a standard beacon? I though that we were operating 50.550 AX25,USB till after the shower? I have been running a standard beacon there during the day and meteor mode at night after the band dies out.

MT63 operation on 28.130 has made BeacoNet unusable for most of this afternoon.

Good news is that band is open to Europe and North Africa.

Was just going to ask what that was that I was seeing from about 600HZ to 1450 HZ. Eating up the waterfall, but doe not seem to be affecting the scan.

Program is about 525K and I will send you the PSKCORE.DLL File and the CRC check DLL even though you should already have it.

32Meg and 150MHZ is a good platform to check on. If it will handle this plus UiVIew and Mailer then I thing we have a working multi channel receiver.

I'll add you to the mailing list and when I ready to send it out, you'll get it. Still working out a few bugs and cosmetic things.

Let me know how you want me to setup after 10 dies out and I'll fdo it. I checked out 6 meters the other day and now that I removed the TVI filter (-65dB roll off @ 54 Mhz) from the Coax the antenna now works!!!! I can tune up just about anywhere onthe 6 meter band.

Guess I will stick with 50.550 BEACONet.25 USB till after the shower. This
shower is supposta peek on the 3rd at 18:00 Z. I will start 24/7 meter mode
on the first. I am running a J-Pole now and standard 5 min. beacon but,
during the shower I will be running my beam pointed at 20 degrees.

1. [propnet] Running Meteor Mode

From: RickfordG@aol.com
Date: Tue, 1 Jan 2002 09:31:12 EST
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54453-2002.01.01-09.00.29--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all
I started meteor mode this morning on 2 and 6 meters. I am hearing packets on 2 but I think they are from locals or at least in my area time slot. I checked the Meteor registration page today and 3 folks have signed up. I saw that K0BVZ in Florida signed up and N8QLT I am just about in the middle of them. Sense I have no idea what the other local is doing I will run My Omni on 2. If the other local is beaming north Ill beam south. If you get this e-mail please let me know what you are doing.

6 meters is as planned. Beaming 20 degrees. Ev, looks like the power out has climbed to 40 watts.

Rich

2. [propnet] UI-Mailer Info [was: Re:[rvhfg]BEACONet]

From: "Ev Tupis (W2EV)" <w2ev@arrl.net>
Date: Tue, 01 Jan 2002 09:39:14 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54458-2002.01.01-09.08.28--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Note to readers: this is best viewed in a monospaced font such as Courier.

With no fewer than 6 local participants (and more on the way) on the 2-meter BEACONet frequency, it was only a matter of time before someone realized the power of the system, and went to the "next level". :o)

"Harry E. Hoffman" wrote:

> The grid square must be bracketed.

Hi gang,
I thought I'd take a moment to explain a little more about BEACONet, so that you could understand the importance of Harry's statement above.

While I've been championing the use of BEACONet for tracking VHF Contest Rovers, you should know that it has several other uses, too. These include Meteor Scatter and propagation monitoring. While I originally designed the BEACONet service because of my love for VHF narrowband operation, it has proven to be quite a tool in the study of propagation on 10-meters and 6-meters.

UI-Mailer is an "add-on" program that was designed for BEACONet by a fellow enthusiast in Arizona, and is *heavily* used on the 10-meter BEACONet^31 (where we use PSK31 modulation, rather than AX.25) and 10-meter BEACONet.25 (where AX.25 is used, just like on 2-meter VHF). UI-Mailer keeps track of how many times a station is heard in any 1-hour period. At 23:59:59, it auto eMails a 24-hour report to an eMail address (like an remailer that is interested in propagation research). The eMail looks like this:

[CATCH] KC5DUI PSK31Srv BeacoNet^31 - 12/26/01 23:59:59 Z

```
Call     Grid  Azm  Dist First 000000000011111111112222 Last  Config

```

```
N2VRJ   EL86TX  129 1509 15:06                76        16:53 HY0E02-15
N7YG    DM42NF  258 1602 16:08                 341      18:23 HY0E02-15
KF6XA   DM13JO  269 2124 15:21                2 1322342 23:51 HY0E02-15
W3NRG   DM12JQ  266 2151 00:07 1              54876BCB7 23:55 HY0E03:[D

Each column is pretty easy to figure out, with two exceptions:

000000000011111111112222 | These are 1-hour increments in time (Z).  Read
012345678901234567890123 | them as columns.  The values within each
------------------------ | column represent the number of times that a
    1        14374         particular station was heard, in Base-36
              6965       | notation: 1=1, 2=2, 3=3, 9=9, A=10, B=11, Z=36

Config    | This "code" has important information embedded in it.  If
 Code     | you want to know all about each value, then you need to visit
------     | the BEACONet website (http://go.to/BEACONet) and read about
HY0G13-11 | it in "Configuration|Configuration Code".  In this case, H=
HY0E02:[F | HF, Y=28 MHz, 0=simplex, the next three characters refer to
          | RF output, Antenna Gain, Antenna Height.  The last three are
          | too complicated to explain in this eMail. :o)

**Why is this a cool add-on application?**  Just look at the data!  BEACONet
answers the question "If the band is open, and no one is listening, does
anybody hear it?".  The reporting station was KC5DUI.  PA3GTI was heard at
0400Z.  The band was open at a very odd time of day.  Was this an anomaly?
What was the propagation mechanism?  Too far for meteor! etc. etc. etc.

As far as I know, though...UI-Mailer works only for transmissions that
include [GR##ID] formatted location information.  It will not keep track of
BEACONet Rovers, who use GPS-formatted data.

Ev,W2EV

I need the protocol for the GPS format and if it is a standard format that I
can parse, then I can add that feature to the mailer as a configuration
option.

Rendered body type: text/plain

>From Tucson, AZ, where the temperature today may equal the measure of snow
fall in Buffalo NY, my XYL Pat (K7YAK) and I would like to wish everyone a
great and prosperous New Year.

As the new year is beginning so does the Spring Term at the University. As
I will be taking classes again this term and working full time, my software
development time will diminish greatly until spring break.

UIMailer 1.73 is still available, but for the purpose of BeacoNet, upgrading
to Version 2 would be beneficial. I will not be developing anything further
on this release except for any major problems that may arise.

UiMailer Version 2 is now at 2.2.1.5. I will be releasing version 2.3
sometime today. It includes some cleaned up code for memory management,
elimination of the time zone setting on the configuration page, status
messages to track the progress of the mail message process and a better
handler for the email scheduler.

PSK Server Version 2 and Multi-PSK are under development. Both appear to
be working quit well. I have not posted Multi-PSk to the web site, but
anyone who would like to test it can send me an email and I will send you a
copy of the distro files. The Jury is out on how much memory and CPU speed
one needs to run Multi-PSK, but it appears to be running quite well on a P90
with 64MB. I am seeking further suggestions on how to improve both these
programs.

I may jump in tomorrow evening, but my elevation rotor is stuck
at 72 degrees in the sky. My arm is in a cast from elbow surgery
and I was hoping to participate. Maybe I will activate with the
antenna pointed in space for some short hops. I have always
elevated it to 15 degrees in past showers. However, 72 degrees
is a bit steep. If I activate, I will register.

73's,
Tim - N8DEU

Hey, Rich,
I have now realized that meteor showers correspond with equipment failure at
W2EV. :o) Having lost my BEACONet computer, I've pressed a laptop into
operation. I've now officially joined the ranks on 50.550 USB @ 1200 baud.

Woooo Hooooo!

I'll leave it TXing every 5 minutes until we hit the overnight hours
tonight, when I'll enter Meteor Mode.

I'll be running 100 watts and a single vertical 1/2 wave dipole. Let's see
what happens.

Ev, W2EV

OK Ev, Ill run for 30 seconds till dark then normal time slot. With the peek
being around 18:00 on the 3rd I was wondering if you will be able to run
meteor mode during the day? Old cranky rig dropped back to 20 watts. Well, At
least the 6 element beam is still working OK.

To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54541-2002.01.01-16.33.27--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Currently I am having difficulty decoding one signal. This station is transmitting about 1500 HZ. The station has a good S5 signal here in Tucson, but the audio is so overdriven, the PSK decoders are having difficulty keeping a lock.

It does not take a lot of drive from the sound card to overdrive the radio. Take a look at the ALC next time you transmit. You should see virtually no ALC action. IF you are driving the ALC to the top of the range, then you are overdriving the radio.

The signal in question is extremely wide on the waterfall

Wayne,
It's Jeff's program. I can't remember the URL...but someone will post it
shortly. As soon as it is in fully stable format (probably vers 2.3) I'll
add it to the BEACONet website, since that's easy to remember
(http://go.to/BEACONet).

Ev

Was doing a bit of software development when Mr Gates and crew presented me
with a Blue screen of Death. Took a while to undo the lockup and save the
critical data I had not yet saved.

Jeff

Bob, KC5DUI brought to my attention there was a version problem with the setup file that he downloaded. I have reloaded the current version to the web site again. This ISP will hold a file that was FTP;d and scan it prior to updating the directory. Appears the file may have had a checksum error or something silly, but the ISP dumped it. Ya figure they would send you an email informing you what happened, but NO!!!!

Jeff N7YG

33. [propnet] Re: [CATCH] band is closed?

From: "Ramon F. Kolb" <ramon@ieee.org>
Date: Wed, 2 Jan 2002 13:12:58 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54688-2002.01.02-12.45.14--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Something is happening.... seems that the band isn't open north-south at all
(which only occurs very rarely). I do hear W3NRG:

I just heard from Dave, KF6XA who is set up on
BEACONet at 10,000 feet on the volcano on Maui.
He is receiving some of us as we write this.

I urge everyone to go watch for him on our 10 meter
PSK31 frequency and report sitings, CRCed or not.

73,

Ed

Rendered body type: text/plain

Hi, Dave,

Wouldn't you know that the minute I snuck
downstairs to get the mail, you called.

In any event, I did copy your call at least
three times, at 15:57, 16:02 and 16:12
California time. Did not get a CRC
but got the call solid and took a picture
with print screen which I have recorded.

Wouldn't you also know that today
was the worst day for capturing BEACONet
stations I have seen at this QTH for a long
time. The only CRC signal I recorded was
WI3X and while I would get N7YG from
time to time it never cleared CRC.

In any event, thanks for giving us the chance
to shoot at the top of the volcano and let me
know of any other experiments that you plan
to make so I can be super alert.

73,

Ed

I had UiMailer version 2.3 lockup on me today. has anyone else experienced
this or is it just my computer. I have quite a bit of stuff running in the
task bar so it may have just been a fluke on this end. I did notice the CPU
resource monitor was stuck at 100%. Had to shut to program down via the
Task manager. If anyone else get this problem please let me know and I will
see if there is some rouge code that got loose.

Jeff N7YG

Didn't experience any problem version 2.3 - sent me the reports at work every two hours and sent out the end of raday report just right. Am going to put UI-View32 back on-line as the MultiPSK program didn't send any beacons out. Had it running on two computers and neither one of them showed sending anything. Did I forget to turn something on?

Bob

46. [propnet] NEW PSK SOFTWARE

```
From: "Wayne Colliander" <wcolliander@earthlink.net>
Date: Thu, 3 Jan 2002 02:32:36 -0000
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
```

Message-ID: <LYR1548-54762-2002.01.02-21.02.01--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Jeff,
The new Multichannel PSK31 is very nice! Great job.

I notice it is easy now to see if a station is overmodulating, you'll see the trace on each side of the carrier showing the same display. Perhaps this could be used to help others get the mod levels correctly set!

Other comments related to the software:
1) When click on the speaker in the tray, it does not toggle on/off, it keeps bringing up another soundcard window with each click.

2) Do you plan a transmit window ?

3) How about the ability to close off a pair of windows or control how many shown?

Thanks for your hard work.
Wayne, KE6AJE, CM87XH

Interesting that propagation seems to be waning today...
Ev, W2EV

Summary for the past 24 hours:
Solar activity was moderate.
The geomagnetic field was quiet to unsettled.
A satellite proton event began at 0245 UTC on 30 December.
Stratwarm Alert exists Wednesday.
Forecast for the next 24 hours:
Solar activity will be moderate.
The geomagnetic field will be quiet to unsettled.
The proton event is expected to continue.

I did have a similar lockup at sometime today, not sure when as I was at work.
Also, remember the "timer off" thing. Well it never changed to "timer on" and I could only transmit a beacon with Ui-View.

Rendered body type: text/plain

I personally heard someone on 50.550 USB packet via a meteor burn. The
Doppler shift was quite noticable...and my TNC decoded nothing. I certainly
don't want to discourage the experiment, though. It may have been a fluke.

I'll be entering Meteor Mode again tonight and will let it run for as far
into tomorrow as the wife will put up with the TVI. :o)

Check the COM port selection and control line. During the installation it
defaults to COM1 and NO PTT line.

I use a vox type circuit (Tigertronic SignaLink) so leave the setting on
Control Line on None. It doesn't seem to generate it's own signal but works
fine with the one from UI-View32. Guess I was confusing the
situation.....MultiPSK xmits beacons from UI-View just fine, doesn't
generate its own beacons.

Hi Ev,

That was when I started running the latest version of MultiPSK (Jeff has
added more neat features) and it didn't generate any beacons. I'd shut
UI-View32 down so as not to confuse MultiPSK and for some reason didn't get
any beacons. I've started UI-View back up with MultiPSK so should have
beacons from now on.

53. [propnet] Report from Haleakala

From: Dave Donnelly KF6XA <kf6xa@qsl.net>
Date: Wed, 02 Jan 2002 23:43:47 -0800
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-54831-2002.01.03-02.13.50--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hello all,

I was able to spend about two hours beaconing from the 10,000 foot summit
of Haleakala on Maui today (2 January). Let's see that would have been
about 2230 utc until maybe 0015. I was using the HTX-10 to a sloping dipole
whose upper end was only about 20 feet at the start. I had to lower it as
the wind increased.

It was clear and breezy (about 40 knots) atop the mountain, and I had a
clear view to the northeast. I immediately copied W3NRG and N7YG; those
two were the only ones to plot on UI-view today. I also saw enough of W2EV
and WI3X to recognize from the grid info or partial call.

I also saw quite a few occurrences of near-simultaneous transmissions on
frequencies 40 Hz apart. I had many signals that seemed to lock on, but
never decoded. I heard one signal about 400 Hz above the others; it seemed
to include the grid EM92. I tried both the old and new PSK servers, and
they seemed about the same: neither decoded many signals well today, even
though they were quite strong.

I used mostly psk31srv as I wanted to beacon frequently, not just every 15
minutes. Too many things to set in UI-view; I forgot to change the unproto
info in APRS setup and took quite a while to find it so I could set HY0E09
--- not a config code you'll see too often.

It's 80 miles from the top of Haleakale to Mauna Loa or Mauna Kea on the
big island; I'm happy to report that you can work the repeater there at
that distance with 2 watts to a rubber duckie.

This experiment occupied seven hours, about, for not quite two hours of
beaconing. It was lots of fun, but almost failed completely, as I only
just remembered to check the power in the rental car's cigarette lighter as
I was leaving the hotel.... and found the fuse blown ... Thank goodness
there's a Radio Shack even in Lahaina. From Ed's comments, it was a weird
day for beaonet signals. I was surprised I didn't hear the usual signals
from TX and FL.

I'm off now until Saturday, perhaps about 1900utc, from Oahu.

Hi Dave,
It seems that the polar paths were experiencing some fairly extreme
conditions yesterday. 6-meters was open from the west-coast to Europe, yet
10-meters was absolutly not. It looks like the proton event that we're
experiencing had a real interesting effect on things.

Thanks for taking the time to bring along the goodies, though! :o)

I believe yesterday the propagation just was not there on 10 meters and from
what I saw on 6 meters on my end, nothing there either. Today I am seeing
bits and pieces of WI3X. MultiPKS is trying to decode. I do not see any
indication of a signal on the receiver S meter nor do I hear any PSK audio
from the speaker. So maybe the electrons will favor propagation today.

Rendered body type: text/plain

For the past few days I have been trying to copy a rather strong signal that
has eluded MultiPsk, PSK Server, PSK31SRV, WinPSK and Digipan. From what I
can determine, this signal is transmitting on 1500HZ, about every 5 minutes
and is 22 seconds of an idle signal. The signal is extremely overdriven
registering between +12 and +18db on the IMD scale. The signal has wiped
out WI3X's signal a number of times in the past hour. From propagation
history, It appears this signal is out on the east coast somewhere.

Not sure how this would happen with any of the programs we are using except
for a problem with a corrupt PSKCORE.dll file or a Windows problem.

Jeff Steinkamp - N7YG

Rendered body type: text/plain

Proagation is a bit strange today. I just got a hit from W3NRG, but did not
pass the CRC test. LZ2HA is calling CQ DX at 1500HZ so there is a path to
Europe from AZ, and the other signal I can not decode I suspect is being

generated without the aid of UI-View or one of the PSK Server programs. I
copied the station at the following times:

    16:24:52 for 15 seconds
    16:29:02 for 19 seconds
    16:30:03 for 30 seconds
    16:33:00 for 32 seconds
    16:37:20 for 20 seconds

Hi all

I have no idea what a packet would sound like that would be affected by
Doppler shift. I did hear several wearied signals on 6 meters that sounded
like a (sort of) high pitch whistle or wine that slowly descended in pitch.
No clear packets.

We have a winner on 2 meters. Ev I do have a screen shot if you want it let
me know.

Richard

A better bet would be to move to 17 meters. I have been on 20 in the evening while I test some of my software and I can tell you the place is a ZOO!. There are more overdriven signals than a 1980's acid rock band!!!

Jeff N7YG

Well, I'm glad I got through. I didn't receive any packets on 2m via MS.
Bummer.

At 1300 EST (1800z)today (the beginning of the predicted peak) I decided to point the beam directly south at you, Rich, and increased the transmit slots to 10 second intervals at 0, 15, 30 and 45 seconds. Since I didn't have any locals also trying for the Quads, I decided to increase my chances and see what the shotgun approach to MS would yield. Looks like I blasted a couple.

I also decided to remove my email address from the beacon to result in the shortest packet possible. That might also have had an effect. Anyone who looks me up on QRZ can find my email, so I eliminated it to hopefully increase the success rate.

Rich

Yup, that's what USB-based packet sounds like.

Congrats on the catch! This is quite significant, given the very few folks
who are participating on 2-meters. Well done!

Cool. I'd love to play...but I'm quite preoccupied with some work on
2-meters right now (BEACONet for contest rovers...and the January VHF
sweepstakes is just a couple of weeks away).

Keep the fire burning...I'll be back in full force after the third weekend
of the month. :o)

Well, Rich It worked. You also had something else going for you. With the
snow and clouds my solar power had little to no out put and I had to rely on
a battery charger to keep things going. Sense the main focus was the SSB test
on 6 meters and the battery charger could not handle about 200 watts I cut
off the 2 meter amp and drooped out of meteor mode on 2 and left 6 running. I
did run meteor mode at about the last half of the peek on 2 but undoubtedly
to late. Also I did not use my Omni at 90 feet. I switched to my 13 ele beam
at about 8 feet and pointed it at you and elevated it 20 degrees. I am
confident that the choices we made generated success. I think that maybe it
might be a better way to run meteor mode?

Thank you Ev

Well, then I heard a lot of them. My 6 meter mode is still running should I
continue?

Jeff: That being the case, maybe 10.145 might be a better choice. Often monitor 10151 aprs during the p.m. and see locations all night long.

  A better bet would be to move to 17 meters. I have been on 20 in the evening while I test some of my software and I can tell you the place is a ZOO!. There are more overdriven signals than a 1980's acid rock band!!!

That might be intrusting to try. Let me see if I can get an antenna to load up there. I think this GAP vertical is suppose to work on 30 meters, but I 'm sure I can tune the 40 meter windom to work there. I will be shutting down 6 meters in a while and will setup on 10.145 until the morning (assuming an antenna loads up!!!)

More ERP is always better. Moderate beam makes things better than does an omni...even if the omni is significantly higher.

Nice job, everyone. Given the limited participation, one or two successes are nothing to sneeze at.

Interesting thought, Rich! Let's see if I do my math right (somehow, I
always seem to goof when I do this, so someone will have to straighten me
out if I did this time, too)...

At 1200 baud, overall throughput is 120 characters per second.
"rweinkauf@msn.com" = 17 characters = 17/120 of a second = ~0.15/second.

While that's not much in "standard mode", it adds up in meteor mode where a
lot of frames are transmitted in any individual 15-second interval.

Perhapse you're on to something here. This is the reason for omitting eMail
address in the BEACONet^31 payload.

The calculations may result in fractions of a second saved that seem
insignificant. However, empirically I find that with the email address
included I am transmitting about 3 full BeacoNet packets per second, and
without it I'm getting about 5 full BeacoNet packets per second transmitted.
That corresponds with a .13 to .15 second difference, as you determined, but

my throughput is up 66%.

And, as Rich (WD4RBX- awful lot of "Richs" on this mailing list) pointed out, having a bristling beam pointed right at me for receive probably helped a great deal.

Increasing my duty cycle to 66% is probably not a good thing to advertise- hogging the frequency in a local area is nothing to be proud of, but the participation of locals here has fallen off, and I wanted to experiment. I was transmitting about 30% during the Leonids, 5 second bursts at 15 second intervals, to distribute my chances of hitting something throughout each minute. That didn't work for me, but I did hear N8DEU, Tim, during that shower.

I think for the next one I'll keep the packet as short as possible, and transmit in 4 or 5-second bursts every 15 or 20 seconds.

Rich

Sorry, the Oahu hotel room, although on the 16th floor, faces southwest,
with the usual steel and concrete surroundings.  It wasn't worth the effort
to get everything out for one day.

Next try, Monday or Tuesday from Kauai.
```

73

Dave

Rendered body type: text/plain

Sorry fellow BeacoNetters:

I was doing some wiring in the basement yesterday and I inadvertently turned off the power to my transmitter.
I was not transmitting starting some time yesterday until abt 12:30z today.
transmitter back up now.
CUL

Rendered body type: text/plain

This weekend is the ARRL RTTY contest and I see some of the contestants have
move down to 10 meters this morning. It was a zoo up on 20 yesterday while
I was testing out some software. It will be interesting to see how our PSK
software filters out the RTTY signals and decodes the PSK signals.

Hi, Dave,

I looked for you on Saturday but of course you were
not transmitting.

The band has been so lousy here that we will need
some special good luck to record you from Kauai.

73,

Ed

Not sure what happened to the catch report for today, but I think I had
connection problem while I was out and nothing got posted.

After days of frustration, EL98PC is up and going.
It is the only station south of Jacksonville as far
as I can determine. Will try to run it as much as
possible. Looks like a real interesting and long-
term project.
73 to all from Carl - K0BZV (EL98PC)

Roman
You may be the station I am hearing that is pumping out an idle tone for about 20 seconds every 5 - 6 minutes. I have been hearing this station for about a week or so. I figured it was coming from the East cost because it appears about the same time I start getting WI3X and disappears about the same time. I have tried every program I know of to try and decode this signal, but each time it the same, an idle signal.

Might want to check you sound card and see what's up.

Ramon

This ain't you. I am now receiving your signal along with WI3X very well
today (1400HZ) . I still have the Idle tone at 1500HZ.

```

```
Where did everyone go?
I've had a copy on N7YG and KC5DUI since abt 14:00Z.
I have not heard PA3EUG at all today.
There was a bunch on a few weeks ago when I first started
but now I get only a few stations.
Are condx that poor or is everyone taking a break?
```

I may just let my xmiter run so U all can receive my beacons, but not send
in reports for a bit.
I need to do some work on the old computer anyway and this may be a good
opportunity to do that.

Also, I am still interested in going to 2M packet 146.585 not so much for
meteor scatter
but just to try to spot band openings and anomalies.
You see, I live just outside of Hershey, PA. and on a regular basis I can
work a repeater in Staten Island, NY.
I would like to see if the band opens in other directions and I think
BeacoNet is just the ticket.
We need more people transmitting on 2M to make it useful but I do not know
how to get em interested.
You know, it wasn't until the other day as I was reading back issues (May
2001)of QST (Q Street as it is called),that I realized that Ev (W2EV) wrote
the whole article on 2M BeacoNet. Bravo to you Ev.
If you could figure how to get more people pumped (the article worked for
me) that would be super.

Hope to see everyone soon

Dane (WI3X)

I'm pumping out somewhere around 60-70 Watts at the moment, ALC is nicely in
range, but nobody seems to hear me. I hear a lot of stations... What's wrong
(with my transmissions)??

I suspect the reason you are not hearing much is because everyone who on
currently is on the east coast. I've had a copy on you since about 14Z along
with everyone else. This is about when the band opened. I just started to
copy Dave KF6XA from KH6 land a few minutes ago.

Jeff N7YG

Great Rich:
A little bug told me your spring will be earlier than my spring.
I hope to have all 2M antennas in place by then.
Let's get a few more.
Fire a message out when you are ready.

Dane (WI3X)

Hi

I got on this morning about 1900UTC. The antenna is clamped to the railing
and does have a northeast exposure, but to a small hill. I see no one
heard me today. I didn't copy anything.

The complication here is that the sliding patio door has an interlock to
prevent the air conditioning from running when the door is open. The coax
keeps the door open, the door keeps the A/C off, and the XYL is not amused,
but tolerated it today. We'll see about tomorrow, if anyone heard me today.

73

Dave

Last night around 0430Z (2130L) I was listening to a radio show on one of
the local FM station at 94.1. All of a sudden I was actually listening to 3
different station, the local station here in Tucson, AZ, a station I think
was located somewhere in New Mexico and a Mexican station I believe may have
originated out of San Diego.

This particular radio we are using is a cheap AM/FM clock radio that has
been dropped no less than 25 times and is held together with safety wire and
super glue. The antenna is a 6 inch piece of 22 AWG wire connected to an
electrical conduit running from the basement to the roof. The building is
framed with metal studs and the covered with sheet metal siding. Not the
greatest place to receive RF.

All three station were about the same signal strength as it was difficult to
distinguish between the 3. This anomaly lasted about 30 minutes. I checked
my BeacoNet setup, but did not see anything that would indicate similar
propagation on 10 meters.

A few things on 10 meter propagation:
- Es layer seems to be quite ionized. I am hearing WD5RBX, who is within my
skip range for F-layer propagation, but who is in perfect range for Es
propagation

- F-layer is pretty weak.

How far do you estimate these stations to be away? Could be a "tropo" duct
that was around. If my European experience is of any guidance here, tropo
openings on 100-150 MHz occur mostly around 17:00-22:00 local time. I am not
sure if there is any relationship between time-of-day and tropo conditions.

Tropo is a possibility, I estimate the distance at no more than 500 miles.
San Diego is about 350 miles I think.

142. [propnet] MultiPsk

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Tue, 8 Jan 2002 14:49:07 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-55985-2002.01.08-16.18.45--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I am contemplating discontinuing development on MultiPsk. Although this was
a great experiment, I believe the program, in it's present form is a massive
resource hog. As long as the program is the only program requesting
resources from windows, it's a happy camper. If another program is running,
then there is a fight between the two to see who controls the CPU first.
Even with threads, this has become an issue.

I have been running this on my machine, 350 MHz with 256 MB of memory and as
long as the only thing running is MultiPsk, UI-View and the mailer, we are
running with about half the resources in use. Once you introduce another
program that may be resource intensive (usually on startup) you could reach
a point where resource usage could exceed 100%. This is when the crash will
happen. As most have other application running prior to starting MultiPsk,
the conservation of resources becomes a greater issue.

I'm open to discussion, maybe scale the program back to 3-5 channels. In
the meantime I will concentrate on PSK Server and Mailer2.

Hi Jeff,

D/L UiMailer Version 2.4 and have it running - switched just after raday and
it appears to have picked up the files ok.

MultiPSK with 3-5 channels sounds like a GREAT idea.  Using 3 channels and a
10 minute cycle we could have 60 beacons running (if my math is right) which
unless Ev writes another GREAT article for QST and the participants increase
exponentially should be sufficient.  Using my P90 as an example, I think it
could handle 3 channels without much difficulty.  Don't want to have to
switch computers.  Since I haven't operated mobile in quite some time I
think I'm going to take the RS HTX-10 out of our van and set it up for
BEACONet^31 so I can use my TS-450 to actually talk with someone :o)  Of
course I'll have to put in a second antenna just for BEACONet - probably a
vertical dipole.

Anyway, I vote for a 3-5 channel version of MultiPSK if you have time (maybe
you could set it up so each op could configure it for the number of channels
wanted/needed - I'm not a programmer so don't know if this is feasible or
not).

Bob - KC5DUI

Ev,
EL98PC is up and running on 147.585 only at the moment. I try to run
it whenever I am home. As I work second shift (1600L-2400L), it is off
as I have a thing about unattended stations. Working on that problem
as fast as possible. Also, I plan to get a HTX-10 out of the spare
room and light it off on the 10 meter band. This Beacon thing is about
the most fun I have had with ham radio in years. I have nearly got the
QST article memorized and am also looking at the meteor scatter stuff.
Many thanks for the BEACONet web page. It is my main source of info.
Even got a set-up with UI-View for the ISS.
73 and Keep the Beacons Buzzing!!!   Carl - K0BZV (EL98PC)

Roger that Ramon!! Have a new version running now and it seems to be doing
just fine. I should have sent an email out to the list when I saw what
happened but got sidetracked. Data should be good today (have you showing
as of 1353Z - only one noted so far).

Bob - KC5DUI

Got the new tuner installed that I received from Jeff yesterday. (My vote is on him for BEACONetter Of The Year, if we ever get around organizing this award). It has a couple of neat side effects (beyond actually tuning my antenna pretty well :-)

- SWR meter on the TUNER and on the TRX are not the same... 1:1 on the tuner means 1:1.2 on the TRX. (Funny, but not really relevant)
- It seems to have resolved my ground loop problems. Don't ask my why... I haven't grounded the tuner. So no more feedback on my audio line that makes the ALC level go bezirk, and thereby forcing me to go very low power. I'm back at ~80 Watts output in the peaks right now.

Unrelatedly, I noticed that the noise level has been quite high for the last few days. I get about ~S4 noise right now...

Do not trust that SWR meter. It was calibrated back in 1987 on 40 meters.
That type of tuner with the series inductors on the input and ouput and
shunt capicator is a really sharp tuning device. I suspect you ground loop
problem may have been RF getting back into the system ground. That tuner
will filter out lot of harmonics.

I've noticed the same thing here today. Got S-5 on the vertical with S-2 on
the wire. Just turned up the volume and I hear a bunch of overmodulated
chicken banders trying to find a truckstop near Dothan AL. With the
overmodulated audio, marbles in the nouths and the pingers and reverb units
it took a few rounds to figure out what these clowns are up to. Got a great
signal here in AZ assuming they are running the legal limit of 5W (yea,
right!!!).

         The same thing happens here!  I was off the air from the first
until just last night (the ninth) due to computer problems.  I missed the
meteor shower and everything else!

I was without a computer from the first until the ninth, and this may have already been addressed, but -- let's settle on one frequency for 6 -- I've used 53.530 FM, 50.450 USB, 50.550 USB, and now I see a reference to 50.540 (USB?).

I vote for whatever anyone else wants to use -- in other words, I don't have a preference except to use the same all over the country. Anyone else?

Almost sent out an email requesting some to turn the propagation switch back
on, when I discovered my mode switch was bumped to the LSB position.  So of
you have been trying to decipher a strange signal, that was me.

Jeff Steinkamp - N7YG

Rendered body type: text/plain

Where are we all on six meters these days? 53.530 FM or 50.551 USB? Or
somewhere else entirely?

After nine days without my PC I feel a little bit lost! <G>

Thanks,
Earl

Hi Earl
I ran 53.530 AX.25 for about a week after the shower, during Killer band
openings and heard nothing. I shut it off. I have to use my main HF rig to
operate 6. I can let my beacon run when not in use.

Ed,

I would suggest you upgrade to Mailer version 2.3 (or later), if you
can. This version has a lot of advantages over 1.7, and (even for me!)
has been proven to be extremely stable. The only drawback could be, that
you need to run it continuously together with PSK31Srv, but it almost
takes no system resources and doesn't interfere with UIView operation at
all.

And... it resolves the bugs that version 1.7 had (among which the "ghost
reports")...

Thanks and 73s

Rendered body type: text/plain

Hi Ramon.

I know that UI-Mail 2.3 is a great step forward.

I had a lot of trouble getting the 2.0 version to not
conflict with other programs I had on my
UI-View machine including UI-Path which I use
for my Groundwave experiments with KF6XA.

Also, I do not let my computers go on line
automatically and the last time I worked with
2.0, it was unhappy in the manual transfer mode.
Maybe that is fixed in 2.3 or maybe I am a special
case (which would be no surprise!)

I have been thrown into a new job which is
taking up the time I normally have to fight with
my four computers. Maybe when things settle

down a bit, I can devote the day it usually takes
to get all pieces of the software puzzle to
cooperate.

I understand the value of having everyone
reporting in the same format.

73,

Ed

I also would like to try my hand at 6 meters.
The noise in my area on all hf bands for the past few days has been
terrible. (As reflected by my reports)
Now, if we could settle on a frequency as suggested by Earl., I would
prefer 53.530 or any FM portion
as I have an old Motorola unit that could be fixed up and re-crystaled
and if that doesn't work I can get one from the guy down the road,
I could run that unit full time.
We need to find one freq and mode for 6 as there ain't a whole bunch of us.
My time frame would probably be shortly after Easter.
    (1) I need to take down my old big ugly satellite dish to use the
mount to put up my 6M beam.
    (2) I need to finish the room in the basement for the kids.
Then I can think abt this 6 meter stuff.

53.53 is *the* frequency.
50.431 is for BEACONet^31 only and 50.450 was an experiment with USB AX.25 during
meteor showers.

Welcome back. :o)

184. [propnet] PSK Server and Mailer

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Fri, 11 Jan 2002 00:51:50 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-56597-2002.01.11-09.31.23--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

PSK Server

I have had to change the transmit timing routines in PSK Server. I tried to
adapt it so the timing could be variable to accommodate changing
propagation. Alas, the code became extremely complicated and has produced a
number of unexplained 'bugs'. I have change to code back to the 15 minute
time interval that follows the transmits schedule I posted a few weeks ago
and have listed on the web site.

I have also adjusted the program to automatically display the correct
version number in the caption bar of the main form and the about box. I
moved the Spectrum display to a tabbed control and placed it behind the
waterfall display. The vector display has been moved to the position
originally held the spectrum display. The scan enable check box along with
the upper and lower scan limits have been moved from he configuration form
to the main form. I've added a feature that disables the scan feature if
you click the waterfall display. The receive audio frequency will be set to
that frequency represented in the waterfall. If you wish to resume
scanning, hen re-enable the scan by clicking the scan enable checkbox. I
have not updated the help file or the screen shots on the web site. Current
version is 2.3.1.1

Mailer2

I have added code that will announce a connection from UI-View or PSK Server. I have also fixed the code so that if you change from UI-View or PSK Serve to another server, it will automatically connect when you click the selection button. I have synced all the version labels to display the current version. I removed The PSK Server, UI-View and AGWPE directory defaults as they are no longer required. I have also added a block to display the audio frequency the station was heard on the first catch. It is not updated during further catches. This will only display if you are connected to PSK Server. For some reason, UI-view is stripping off that information prior to putting it out on its local server. Current version is 2.4.1.3

I am now back to college so my time will be extremely limited, but I will continue to support these 2 program as time permits. Your feedback is most welcome as Everything you find is something that did not happen on my computer, so the more info you can provide will help in locating the trouble.

Thanks

Jeff Steinkamp - N7YG

Rendered body type: text/plain
```

There will be some errors in my prop report when it comes out. I had a problem with my time stamp that should have been corrected with my time server connection, but that seems to have failed also. So had to do the three fingered salute to get the time reset to the proper time.

Jeff Steinkamp - N7YG

I just wanted to drop you a little note to let you know that I just finished shoveling 3 feet of 'Partly Cloudy' from my driveway. - Ev, take note!!!!!!

195. [propnet] 1/11/2002 BEACONet^31 Recap

```
From: "Ev Tupis (W2EV)" <w2ev@arrl.net>
Date: Sat, 12 Jan 2002 05:46:23 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-56812-2002.01.12-05.16.03--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain
```

```
Below represents - from Easternmost to Westernmost - the stations using the
automatic reporting option (thanks N7YG!) of what was caught in "their
```

BEACONet" (it's our fishing analogy <smile>). These reports come from
PSK31-based operation on 28.131 USB + 1500hz PSK audio.

Imagine a system like this on 2-meters, with participants on either side of
the Atlantic Ocean! All we need is a commonly available frequency (THAT
should be easy <grin>)!

This recap really showcases the power of the BEACONet system as
more-and-more people join-in. It is easy to "see the band" from any
participants perspective and can be quite a valuable tool for many
applications. By the way...keyboard-to-keyboard QSO's may even be made
using this system as well.

Regards,
Ev Tupis, W2EV

I've highlited several more prominent features of the data below:

```
                                Number of times in each        H=HF
                                noted UTC hour that the        |Y=28MHz
                                station was 'caught' by        ||0=simplex
                                the participant, in            |||E=16-32w
                                BASE(36): 1=1, 2=2, 3=3,       |||F=32-64w
                                9=9, A=10, B=11, Z=36          ant=0dBd
                                                               |||||

Hi Ev.
Sorry, I should have reported that my computer froze while I was away at
that time.
Therefore there is a hole in my report.
What puzzels me more is why I am not seeing any stations for the past few
days.
There has been a lot of noise in my area but I did not think it was that
localized.
I have been seeing bits and pieces of KC5DUI and that is it.
CUL
Dane (WI3X)

Hi Dane,
What happened in the 1500z hour? I'm just trying to make sure I understand
what I'm reading. :o)

197. [propnet] 6 Meter antenna question

From: "Burns, Dane" <DaneBurns@hersheys.com>
Date: Sat, 12 Jan 2002 10:20:33 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-56824-2002.01.12-09.50.38--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

If I was to get set up for 6 meter BeacoNet, what type of antenna does the
general population use for this?
I have a beam, but I am wondering if that would be too directional for this
project.
I did see really neat plans for a 6M vertical dipole.
I could have this up a lot sooner than I could have the beam up.
What are y'all using for 6M?

CUL

Hi Dan

I built one of those Coper tubing J-Poles. All I changed was the way you feed
the thing. I did not like splitting the coax and clamping to the pipe. The
dumb thing works good.

The philosophy of BEACONet favors the use of a vertical, omnidirectional
antenna (you never know in what direction the band will open at any given
time).

Meteor Mode is different...you need ERP, and beams give it to you.

I use an MFJ 2-meter 5/8 over 5/8 antenna on 6-meter BEACONet (it loads like
a half-wave dipole). I'm in the process of shipping Jesse (N2VRJ in
Florida) a 6-meter Ringo Ranger. It looks like we have good momentum
building on 53.53!

I will be off the air for a while. The XYL and I were out shopping for a
new flat screen monitor for here computer so I could take the 17 inch job on
hers because my 15" was starting to die. When I returned I dissevered that
the computer had locked up. When I rebooted, no sound card. So another SB
has died in less than a year. Guess I will try another manufacture.

Thanks Ev and Rich,
I'll get to work on the 6M antenna as soon as possible.
I have an odd work schedule and this is my weekend to work again.
This is really starting to be a bunch of fun.
Top priority right now is to track down the RF that is getting into my audio
that the guys on the County Hunters net were telling me about.

The philosophy of BEACONet favors the use of a vertical, omnidirectional

antenna (you never know in what direction the band will open at any given
time).

Hi Dan

I got hooked on BEACONet just over a year ago. Although I might not be the best PR man for the job I do my part to help grow the BEACONet roll call.. I firmly believe that BEACONet's best is yet to come..! BEACONet has a lot of competition for members but, anyone that wants to study band openings and be able to capitalize on them (on the fly) will eventually join us. I have been watching the other "NEW" beacon projects and even though they are technology advanced they still can't hold a candle to BEACONet when one conceders every thing involved.

I am looking forward to 6 meter BEACOnet.25 (AX.25)_ even though my 6 meter stuff is junk.. We had a ball on HYAX.25 last year. PSK31 works BUT.....
AX.25 is one heck of a lot more fun.

The more BEACONet options you exercise the more fun you will have....!

215. [propnet] Sound Card Fixed

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 13 Jan 2002 12:36:36 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-57129-2002.01.13-14.06.24--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have my sound card problem cured. Turns out when I installed the new monitor, somehow or another, the sound card came loose from the PCI socket. Further investigation reveals that there is a minor alignment problem with the motherboard and the case. Pushing on the video card causes enough force to unseat the soundcard if the card has the retaining screw installed.

I am back on the air testing an updated version of MultiPSK that uses only 3 channels. Although the transmit interval is not correct, it is functioning correctly and the amount of resource used along with memory consumption is drastically reduced. If I experience no problems over this week, I will post it on the web site as PSK Server version 3.

Jeff Steinkamp - N7YG

Hello all:
No report this evening.
Last nite I downloaded the newest version of PSKserver and Mailer2. I noticed this morning that the computer had locked up. I restarted it and went to work. I received one report and then no more, so I suppose it locked again. I see no one else has any problems so he trouble must be on my end. The transmitter is still on so you will probably see my station today, but after this.................

I will need to take my station down for at least 3 to 4 days to go on a which hunt, I am told I have some bad RF   or distortion and clipping on my signal (other radio) and I need to check into this. I will dismantle my whole station to see to see if I can isolate the problem or determine if it in my rig (hope not).

C U all later,
Dane (WI3X)

Dane

I had similar problems about a year ago. Go to Radio Shack and pick up some
of the clamp on RFI chokes they sell for computer equipment. Place one on
the keyboard cable, one on the mouse cable and one on each of the audio
cables going to and coming from the sound card. This eliminated most of my
RFI problem. Any RF on the keyboard line or the mouse line will send the
computer into mumble mode.

Check the station ground. Checked the coax connection at the rig. If the
bond from the shield of the coax to the shell side of the connector is loose
or cold, this will cause all kinds of problem especially on 10 meters.

If you have any barrel (m258) connectors and they are from Radio Shack,
throw them as far as you can. These little puppies use a small coil of wire
to connect one end of the connector to the other. I measured the resonance
of one of these puppies and got 28.75Mhz. at 50 Ohms.

Hi Dane,

Had you nice and strong yesterday but haven't seen anything today. I'm
going to be off the air as well - have a "new" computer (P200 put together
with some left over parts at work) that I'm going to install as my "radio"
computer and retire the P90. If things go SMOOTHLY hope to be back up
today.

Bob - KC5DUI

Hi Dane,
>From the looks of it, you've gotten some excellent suggestions from our
fellow BEACONet-ers. Ain't it great to have such a nice resource? :o)

I have been absent for a while in preparation for the upcoming January VHF
Sweepstakes. If all goes as anticipated, I'll have a *ton* of data to write
another article for QST...this time, on the BEACONet.25 advantage to VHF
Contest Roving (and the advantages to using the BEACONet frequency, over
that of the APRS service).

It's amazing how much work goes into writing up something worthwhile. :o)

The VHF Sweepstakes is next weekend...after which I'll be back on 10-meters,
full force.

Keep the band lit-up, crew...I really enjoy reading the auto-posts each
night!

Kind Regards,
Ev, W2EV

```
I'd be interested to get some copies of a medium-to-local sized UIView map
of the area "where you live"... Accept ZIP files by email :-)
Please email me OFF LIST (watch-- pressing Reply will answer to the list!)
and I will assemble a website with all the information for those that are
interested...

Thanks, 73,

--Ramon W1/PA3EUG, Boston, MA, USA [FN42KI]

For some reason the mailer never sent my catch today. Then it
never started the next days log fresh , rather it just started
over top of the previous day as you can see in my # of tx be at
R. Kinda weird, have had this happen a couple of times in the
past month or so.

Jesse
I am not sure what is causing that either. It happened to me once and I
just though it was a conflict with something else in the operating system.
Did you get any error message from windows, and did the data window clear?
If the data window did not clear and the station table still had stations,
then there should have been some sort of error message because the program
had some sort of abort trying to send the message, or connecting to the mail
server.

Apparently there was an error message. My wife saw it but didn't bother telling
me. It was a "socket error", she thinks. If it happens again I'll be sure to be
more specific.

This sounds like it did not connect to your mail server. Are you using MAPI
or SMTP?

Jeff

```
Not sure what happened in my report, but something happened with the file
that is stored each time a catch is made.  Thus the reason for the wired
number from my station.  I have deleted the storage file and started again
to see if this happen again.
Jeff Steinkamp - N7YG

236. [propnet] Off the Air

From: "Bob - KC5DUI" <kc5dui@hotmail.com>
Date: Mon, 14 Jan 2002 18:46:44 +0000
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-57280-2002.01.14-13.16.31--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Hi all,

I'm still off the air. Got my replacement "radio" computer up and running late last night but couldn't get PSK31 Server or MultiPSK Server to install - Mailer2 installed just fine. Should have written the error message down but was late and decided to go to bed instead of fighting with it - think it was something about "vbCrC.ocx not found" or something similar. I'll try again this evening and see what happens. Computer is "old" P200 MMX with 64MB running Windows 95B and seems quite stable so far.

Hope everyone is having a GREAT propagation day!

Bob - KC5DUI

Looks like you had some difficulty with registering the VBCRC.dll and .ocx file. Try the installation again and if you still get the error message, check to see that you have a file called vbcrc.dll and vbcrc.ocx in the windows\system directory. If there, then try to manually register the file with the following commands at the dos prompt or the run box.

regsvr32 /u vbcrc.ocx // this will unregistered the file
regsvr32 vbcrc.ocx   // this will register the file

That should take care of both programs

Jeff N7YG

I use SMTP, and no the data window didn't clear until I played around with it
and sent it manually.

I've noticed a distinct shift in range and duration of band openings as
compared to the month of December myself. I'll be rejoining the AX.25
effort next week. Stay the course, Rich. :o)

Something happened with mailer and it didn't send the report for the previous day and it started to log on top of it. I never caught the problem until 0200 hour. If you were to look at my report for 1/13/02 you would see that my tx was up at R for the fisrt two hrs. Not sure why it happened.

Jesse

Hi all,

Just to let everyone know I'm going to be off the air indefinitely.
Switched to a "new" computer and can't get PSK Server or MultiPSK Server to
install plus Mailer2 installed but gives errors on exit.  Don't have time to
fight with the system now but hopefully will get to it in the next several
weeks.  Have a good time and will be checking the CATCH reports.

Bob - KC5DUI

Created with UiMailer Version 2.4.1.3

I was running BEACONet .25 & ^31 at the same time.
When transmitting on  28.131 my config code was HY0DA1-15
When transmitting on 147.585 my config code was VK1DB1-15

UI-View32 handled the .25 Beacon, the mapping, and passed all the data over
to the mailer. PSK Server handled the ^31 Beacon and passed its data over
to UI-View32.

(((73))) Harry (KA2ENE)

Hi all

I don't see any problem with doing this but I want to be sure. I ran across 3
200 watt computer power supplies. I want to be sure that there would not be a
problem with paralleling the +12 V @ 6 amps giving me 12 volts @ 18 amps.

Will this work?

Rich

Rich

This should work, but if you have enough meters, I would set an amp meter up
on each of the power supplies to make sure they are sharing the load. There
are switching type supplies and sometimes will have problems in their
switching circuit when paralleled with another especially if they are close
to one another. Make sure you have the AC lines phased correctly or you
will have one big RFI generator!!!

Jeff N7YG

273. [propnet] Software Updates

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Fri, 18 Jan 2002 11:19:43 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-57869-2002.01.18-12.49.47--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

I have update Mailer, PSK Server and MultiPSK and placed them on the web
site.

I finally discovered the small little errant bit of code that was causing
the occasional floating point error and also causing the program to write a
blank file at 23:59 when the file mode is sleeted. At least it works on my
machine.

I found the problem with portions of an email address being substituted for
the frequency heard column. Seems I used the @ symbol to delaminate the
catch from the frequency. So if I found the @ symbol anywhere in the catch,
the following 4 characters should have been the frequency heard.
HELLLLLO!!!! this is the deliminator between and email ID and it server.
That is fixed. Had to update all three programs to fix this.

MultiPSK has been rewritten as a 3 channel receiver and will become PSK
Server 3. PSK Server 2 is the single channel unit.

Pleased update your software with the new version and let me know if you
have any more problem. I will work them as school time permits.

Jeff Steinkamp - N7YG

NASA Science News for January 18, 2002

Evidence is mounting that some solar cycles are doubled-peaked. The
ongoing solar maximum may itself be a double -- and the second peak has
arrived.

FULL STORY at

<A HREF="http://science.nasa.gov/headlines/y2002/18jan_solarback.htm?aol27402">The Resurgent Sun -

Today around 0200 I had a PSK contact with a station in KH8 American Samoa.
Turns out this individual is an old military acquaintance of mine who is
there on vacation. Copy was strong until around 0225 when the band just
shutdown. We were both using about 25 watts and he had one of those Diamond
H.F. antennas for the car. Not and ideal setup, but it obviously got a
signal out.

There is propagation to the Pacific Rim, just need to rattle a few chains.
I do not suspect he will joins us at the present, but we might see him in
the future from V73. They have a 24 hour beacon on 6 meters from that
station so I see no reason they couldn't put up a 10 meter PSK beacon. When
I operated our of that station a few years ago, there was a 2950 10 meter
rig sitting in a box waiting for a mission. I hear it is still in the box.

Jeff Steinkamp - N7YG

Gd morning all:
I think I have everything fixed up here.
First, I had to take my whole station apart to try to find where the RF
was getting on my signal   (Not the 10M rig but my IC-746).
Not much fun but it turned out to not be RF at all but a failed IC chip
that would not allow the HF finals the proper forward bias current so it
was operating in class c mode (Bad, Bad, Bad).
Next my computer went on the fritz and would lock up abt every 5 min no
matter what software was running.
I think I have that straightened out now so I hope I am back up and running.

Glad to be back with the group!
Dane (WI3X)

287. [propnet] anutter question for Jeff

From: Dane <dane.burns@verizon.net>
Date: Sun, 20 Jan 2002 10:33:52 -0500
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-58132-2002.01.20-10.03.58--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Jeff:
On my computer, if I run PSKServer (single channel) it will communicate
with the mailer program just fine.
Now, as before I noticed with MultiPsk (10 channel, or the new 3 channel
which is really cool) there is no communication
between Multi and the mailer program. (By communication I mean it will
not transmit my info but it will receive the other stations)
I need to run Ui-View to to get my self catches.
My computer is a 133 Pentium with only 24mb ram so the trouble is
probably on my end.
What do you think Jeff?

Dane
Let me see if I understand this correctly. If you are using the MultiPsk,
you are sending data to the Mailer program, just not you info, but the info
is going to UI-View?

Jeff

Jeff:
Im not so good at explaining, i'll try again.
If I run Multipsk, it does not send my station info to the mailer nor
does it transmit my station data.
I need to run Ui-View to send my station data
If I run the single channel version of Pskserver, then everything is OK.
I do not need to run Ui-View.

Rendered body type: text/plain

Hi all

Looks like I have worked the bugs out of my BEACNet.25 HY equipment. Also I
found out that my Fluke DDM has been lying to me. Looks like my (solar)
battery charger controller had been set wrong. I corrected the high voltage
disconnect today. Keeping my fingers crossed.

This report is from a setup that was RX only @ the time. I am now using this
set up level 2.

Jeff

Got the same problem here eater version. It will communicate with mailer for
a while then quit. It has never transmitted my beacon.

If you are running the new 3 channel version, just above the waterfall there
is a red LED graphic. The label next to it should say TX MultiPSK. If is
say TX Other, click the LED and it will change and MUltiPSK should
tranmitthe beacon and not UI-View.

Jeff

Thank you Jeff:
Works good now.

296. [propnet] 10 meter band was really open

From: "Jeff Steinkamp" <n7yg@arrl.net>
Date: Sun, 20 Jan 2002 21:00:02 -0700
To: "TAPR BEACONet/PropNET Discussion Group" <propnet@lists.tapr.org>
Message-ID: <LYR1548-58206-2002.01.20-22.30.13--lyris.propnet#tapr.org@lists.tapr.org>
Rendered body type: text/plain

Today I took a break from everything and did a little DX'ing on 10 meters.
The band was wide open most of the day starting in Europe and closing out in
the pacific. I made about 75 contacts from around sun-up to just after
sun-down.

PSK is taking hold in many countries outside the US. Today is the first
time I've heard any PSK activity out of Russia and Korea.

I talked up the BeacoNet program quite a bit today so we'll see what
happens. The military guy in Korea was quite interested and he might be

able to pitch it to the Koreas via the cultural exchange program between the
local and the US forces HL9's

Jeff Steinkamp - N7YG
_____
Couldn't fix your brakes, so I made the horn louder!
